Sharing the Adventure with the Student National Research Council, Board on Science Education, Division on Engineering and Physical Sciences, Space Studies Board, Planning Committee on Sharing the Adventure with the Student: Exploring the Intersections of NASA Space Science and Education: A Workshop, 2015-06-17 On December 2 3 2014 the Space Studies Board and the Board on Science Education of the National Research Council held a workshop on the NASA Science Mission Directorate SMD education program Sharing the Adventure with the Student The

workshop brought together representatives of the space science and science education communities to discuss maximizing the effectiveness of the transfer of knowledge from the scientists supported by NASA's SMD to K 12 students directly and to teachers and informal educators. The workshop focused not only on the effectiveness of recent models for transferring science content and scientific practices to students but also served as a venue for dialogue between education specialists, education staff from NASA and other agencies, space scientists and engineers, and science content generators. Workshop participants reviewed case studies of scientists or engineers who were able to successfully translate their research results and research experiences into formal and informal student science learning. Education specialists shared how science can be translated to education materials and directly to students, and teachers shared their experiences of space science in their classrooms. *Sharing the Adventure with the Student* is the summary of the presentation and discussions of the workshop.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials, and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics, and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies? How will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. *Cost Effectiveness and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their

inclusion on the list of technologies applicable for the 2017 2025 CAFE standards      **Minerals Yearbook** Geological Survey,Interior Department,Mines Bureau,2019-01-31 This volume covering metals and minerals contains chapters on approximately 90 commodities In addition this volume has chapters on mining and quarrying trends and on statistical surveying methods used by Minerals Information plus a statistical summary      The Role of Teachers in Students' Social Inclusion in the Classroom Luciano Gasser,Antonius H. **Comprehensive Systems Biomedicine** Pietro Lio, Enrico Capobianco, 2014-12-03 Systems Biomedicine is a field in perpetual development By definition a translational discipline it emphasizes the role of quantitative systems approaches in biomedicine and aims to offer solutions to many emerging problems characterized by levels and types of complexity and uncertainty unmet before Many factors including technological and societal ones need to be considered In particular new

technologies are providing researchers with the data deluge whose management and exploitation requires a reinvention of cross disciplinary team efforts The advent of omics and high content imaging are examples of advances de facto establishing the necessity of systems approaches Hypothesis driven models and in silico validation tools in support to all the varieties of experimental applications call for a profound revision The focus on phases like mining and assimilating the data has substantially increased so to allow for interpretable knowledge to be inferred Notably to be able to tackle the newly generated data dimensionality heterogeneity and complexity model free and data driven intensive applications are increasingly shaping the computational pipelines and architectures that quant specialists set aside of the high throughput genomics transcriptomics proteomics platforms As for the societal aspects in many advanced societies health care needs now more than in the past to address the problem of managing ageing populations and their complex morbidity patterns In parallel there is a growing research interest on the impact that cross disciplinary clinical epidemiological and quantitative modelling studies can have in relation to outcomes potentially affecting the quality of life of many people Complex systems including those characterizing biomedicine are assessed in both their functionality and stability and also relatively to the capacity of generating information from diversity variation and complexity Due to the combined interactions and effects such systems embed prediction power available for instance in both target identification or marker discovery or more generally for conducting inference about patients pathological states i e normal versus disease diagnostic or prognostic analysis and preventive assessment e g risk evaluation The ultimate goal personalized medicine will be achieved based on the confluence of the system s predictive power to patient specific profiling

*Coal and Coalbed Gas* Romeo M. Flores, Tim A.

Moore, 2024-01-24 *Coal and Coalbed Gas* Future Directions and Opportunities Second Edition introduces the latest in coal geology research and the engineering of gas extraction Importantly the second edition examines how over the last 10 years research has both changed focus and where it is conducted This shift essentially depicts a tale of two worlds one half Western Europe North America moving away from coal and coalbed gas research and production towards cleaner energy resources and the other half Asia Pacific region Eastern Europe South America increasing both research and usage of coal These changes are marked by a precipitous fall in coalbed gas production in North America however at the same time there has been a significant rise in coal and coalbed gas production in Australia China and India The driver for higher production and its associated research is a quest for affordable energy and economic security that a large resource base brings to any country like Australia s first large scale coalbed gas to liquid natural gas projects supplying the demand for cleaner burning LNG to the Asian Pacific region Since the last edition of this book global climate change policies have more forcibly emphasized the impact of methane from coal mines and placed these emissions equal to or even more harmful than CO<sub>2</sub> emissions from fossil fuels in general Governmental policies have prioritized capture use and storage of CO<sub>2</sub> burning coal in new highly efficient low emission power plants and gas pre drainage of coal mines The Organization for Economic

Cooperation and Development OECD countries and China are also introducing new research into alternative non fuel uses for coal such as carbon fibers nanocarbons graphene soil amendments and as an unconventional ore for critical elements New to this edition Each chapter is substantially changed from the 1st edition including expanded and new literature citations and reviews important new data and information new features and materials as well as re organized and re designed themes Importantly three new chapters cover global coal endowment and gas potential groundwater systems related to coalbed gas production and biogenic gas generation as well as the changing landscape of coal and coalbed gas influenced by global climate change and net zero carbon greenhouse gas emissions

**FOREWORD** When I reviewed the first edition of this book my initial thought was Do we need another book on coal geology and then I read it and realised Yes we need this book and my students downloaded copies as soon as it was available So now we come to 2023 and a lot has happened in the past decade For a different reason we might ask if we still need this book or even coal geoscientists and engineers as the world aims for rapid decarbonisation of the energy sector and a reduction of coal as a feedstock for industrial resources like steel manufacture
