Earth Observation of Ecosystem Services Domingo Alcaraz-Segura, Carlos Marcelo Di Bella, Julieta Veronica Straschnoy, 2013-11-12 A balanced review of differing approaches based on remote sensing tools and methods to assess and monitor biodiversity carbon and water cycles and the energy balance of terrestrial ecosystem Earth Observation of Ecosystem Services highlights the advantages Earth observation technologies offer for quantifying and monitoring multiple ecosystem functions and services It provides a multidisciplinary reference that expressly covers the use of remote sensing for quantifying and monitoring multiple ecosystem services Rather than exhaustively cover all possible ecosystem services this book takes a global look at the most relevant remote sensing approaches to estimate key ecosystem services from satellite data Structured in four main sections it covers carbon cycle biodiversity water cycle and energy balance Each section contains a review of conceptual and empirical methods techniques and case studies linking remotely sensed data to the biophysical variables and ecosystem functions associated with key ecosystem services The book identifies relevant issues and challenges of assessment presents cutting edge sensing techniques uses globally implemented tools to quantify ecosystem functions and presents examples of successful monitoring programs Covering recent developments undertaken on the global and national stage from Earth observation satellite data it includes valuable lessons and recommendations and novel ways to improve current global monitoring systems The book delineates the use of Earth observation data so that it can be used to quantify map value and manage the valuable goods and services that ecosystems provide to societies around the world

Thermodynamics and Morphodynamics in Wave Energy Antonio Moñino, Encarnación Medina-López, Rafael J. Bergillos, María Clavero, Alistair Borthwick, Miguel Ortega-Sánchez, 2018-04-20 This book examines the performance of oscillating water column OWC wave energy converters It discusses the influence of humid air inside the chamber and changes in the seabed and also investigates the role of wave energy converters in coastal protection The authors use a real gas model to describe the thermodynamics of the air water vapour mixture inside the chamber and the compression and expansion process during the wave cycle Further they present an alternative formulation with new perspectives on the adiabatic process of the gaseous phase including a modified adiabatic index and subsequent modified thermodynamic state variables such as enthalpy entropy and specific heat The book also develops a numerical model using computational fluid dynamics to simulate OWC characteristics in open sea and studies the performance of a linear turbine using an actuator disk model It then compares the results from both cases to find an agreement between the analytical and numerical models when humidity is inserted in the gaseous phase Introducing new concepts to studies of wave energy to provide fresh perspectives on energy extraction and efficiency problems the book is a valuable resource for researchers and industrial companies involved in thermal energy and coastal engineering It is also of interest to

undergraduate and postgraduate students as it broadens their view of wave energy **Fourier Transforms** Goran Nikolic, 2011-04-01 New analytical strategies and techniques are necessary to meet requirements of modern technologies and new materials In this sense this book provides a thorough review of current analytical approaches industrial practices and strategies in Fourier transform application *Synchronous data acquisition with wireless sensor networks* Funck, Jürgen Helmut, 2018-07-19 Wireless sensor networks WSN are predicted to play a key role in future technological developments like the internet of things Already they are beginning to be used in many applications not only in the scientific and industrial domains One of the biggest challenges when using WSN is to fuse and evaluate data from different sensor nodes Synchronizing the data acquisition of the nodes is a key enabling factor for this So far research has been focused on synchronizing the clocks of the nodes largely neglecting the implications for the actual measurement results This thesis investigates the relation between synchronization accuracy and quality of measurement results Two different classes of time synchronous data acquisition are investigated event detection and waveform sampling A model is developed that describes a WSN as a generic multi channel data acquisition system thus enabling direct comparison to other existing systems With the help of this model it is shown that synchronization accuracy should best be expressed as uncertainty of the acquired timing information This way not only the contribution of the synchronization to the overall measurement uncertainty can be assessed but also the synchronization accuracy required for an application can be estimated The insights from the uncertainty analysis are used to develop two distinct approaches to synchronous data acquisition a proactive and a reactive one It is shown that the reactive approach can also be used to efficiently implement synchronous angular sampling i e data acquisition synchronous to the rotation of a machine s shaft Furthermore testing methods are suggested that evaluate the synchronized data acquisition of an existing WSN as a whole These methods can be applied to other data acquisition systems without changes thus enabling direct comparisons The practical realization of a WSN is described on which the developed data acquisition methods have been implemented All implementations were thoroughly tested in experiments using the suggested testing methods This way it was revealed that a system s interrupt handling procedures may have a strong influence on the data acquisition Furthermore it was shown that the effective use of fixed point arithmetic enables synchronous angular sampling in real time during a streaming measurement Finally two application examples are used to illustrate the utility of the implemented data acquisition the acoustic localization of two sensor nodes on a straight line and a simple order tracking at an induction motor test bench Diese Dissertation untersucht die Zusammenhänge zwischen Synchronisationsgenauigkeit und Qualität der Messergebnisse Zwei Klassen von zeitsynchroner Datenerfassung werden dabei betrachtet die Detektion von Ereignissen und die Aufnahme von Kurvenformen Es wird ein Modell entwickelt welches ein WSN als ein allgemeines mehrkanaliges Datenerfassungssystem beschreibt Dies ermöglicht den direkten Vergleich zwischen WSN und anderen Messsystemen Weiter wird mit Hilfe des Modells gezeigt dass die Synchronisationsgenauigkeit

vorzugsweise als Unsicherheit der Zeitinformation angegeben werden sollte. Hierdurch kann nicht nur der Beitrag der Synchronisation zur gesamten Messunsicherheit bestimmt, sondern auch die von einer Anwendung tatsächlich benötigte Synchronisationsgenauigkeit abgeschätzt werden. Ausgehend von den durch die Unsicherheitsbetrachtung gewonnenen Erkenntnissen werden ein proaktiver und ein reaktiver Ansatz zur synchronen Datenaufnahme entwickelt. Mit dem reaktiven Ansatz können Messdaten auch effizient drehwinkelsynchron und synchron zur Drehbewegung einer Maschinenwelle aufgenommen werden. Es werden Testverfahren vorgeschlagen, mit denen sich die Synchronizität der Datenerfassung für ein WSN als Ganzes überprüfen lässt. Diese Verfahren lassen sich unverändert auf andere Messsysteme anwenden und ermöglichen somit direkte Vergleiche. Es wird die praktische Umsetzung eines WSN beschrieben, auf dem die entwickelten Methoden zur Datenerfassung implementiert wurden. Alle Implementierungen wurden mit den vorgeschlagenen Testverfahren untersucht. Hierdurch konnte gezeigt werden, dass die Interrupt-Bearbeitung der Sensorknoten entscheidenden Einfluss auf die Messdatenerfassung hat. Weiter konnte durch den Einsatz von Fixed-Point-Arithmetik die drehwinkelsynchrone Datenerfassung in Echtzeit realisiert werden. Schließlich wird die Nutzlichkeit der implementierten Datenerfassung an zwei Anwendungen gezeigt: der akustischen Ortung zweier Sensorknoten sowie einer einfachen Ordnungsanalyse.

Tsunami Warning and Preparedness National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on the Review of the Tsunami Warning and Forecast System and Overview of the Nation's Tsunami Preparedness, 2011-03-01. Many coastal areas of the United States are at risk for tsunamis. After the catastrophic 2004 tsunami in the Indian Ocean, legislation was passed to expand U.S. tsunami warning capabilities. Since then, the nation has made progress in several related areas on both the federal and state levels. At the federal level, NOAA has improved the ability to detect and forecast tsunamis by expanding the sensor network. Other federal and state activities to increase tsunami safety include improvements to tsunami hazard and evacuation maps for many coastal communities, vulnerability assessments of some coastal populations in several states, and new efforts to increase public awareness of the hazard and how to respond. *Tsunami Warning and Preparedness* explores the advances made in tsunami detection and preparedness and identifies the challenges that still remain. The book describes areas of research and development that would improve tsunami education, preparation, and detection, especially with tsunamis that arrive less than an hour after the triggering event. It asserts that seamless coordination between the two Tsunami Warning Centers and clear communications to local officials and the public could create a timely and effective response to coastal communities facing a pending tsunami. According to *Tsunami Warning and Preparedness*, minimizing future losses to the nation from tsunamis requires persistent progress across the broad spectrum of efforts, including risk assessment, public education, government coordination, detection and forecasting, and warning center operations. The book also suggests designing effective interagency exercises using professional emergency management standards to prepare communities and prioritizing funding based on tsunami risk.
