Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

- Suppose you had a pet rabbit. What would the rabbit need to stay alive and healthy?
 - In order for the rabbit to stay alive and healthy, it would need water, food, and an appropriate environment to live in.
- A female rabbit can give birth to over 40 baby rabbits a year. Suppose all of her offspring survived and reproduced, all of their offspring survived and reproduced, and so on. If that happened, in only eight years the mass of rabbits would exceed the mass of Earth! So, why aren't we overrun with rabbits? What keeps the rabbit population in check?
 - We are not overrun with rabbits because of the food chain. Rabbits have many predators, and because of these predators the rabbit population is constantly leveling off with births and deaths. So, predators and the food chain are what keeps the rabbit population in check.

 - In which season did the rabbit population increase the most?
 - During the spring season, the rabbit population increased the most due to the nice weather conditions, which call for good vegetation for the rabbits to consume.
 - In which season did the rabbit population increase the least?
 - During the winter season the rabbit population decreased due to the cold weather conditions, which limited the rabbits chances of survival because there was not a large food supply available for them.
