Abstract—The purpose of this study was to determine the effect of a 10-week, 30-min, 3 times per week, low-impact aerobically and resistance training program on the physical fitness of 10-year-old children. The study was conducted in a school setting. The children were divided into two groups: an experimental group and a control group. The experimental group performed the program, while the control group did not. Physical fitness was measured at the beginning and end of the 10-week period. The results showed that the experimental group had significantly higher levels of physical fitness than the control group at the end of the 10-week period. The program was found to be effective in improving the physical fitness of 10-year-old children.

If you are not satisfied with your results, follow the instructions carefully and test your original article. If the editor still requests the (a) paragraph and (b) paragraph, you should repeat the analysis with the original data.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - 1. Turn off the lights at the end of the day.
 - 2. Avoid excessive light intensity, the length of the day and the light spectrum (the color of the light) are important.
- The end of the day is the best time to change the light spectrum. The producer should be looking for the light spectrum to be most similar to the spectrum of the sun at the end of the day. The spectrum of the sun is most similar to the spectrum of the sun at the end of the day.
- The end of the day is the best time to change the light spectrum. The producer should be looking for the light spectrum to be most similar to the spectrum of the sun at the end of the day.

When you install your T-Value One Connection, improper installation of all four screws (50 connections for One Connection®) will void the warranty. Please, before using any (1) to ensure proper ventilation. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, if the price of the output rises, the producer will want to produce more of the output, and if the price falls, the producer will want to produce less of the output.

Caution: Spilling, pouring, or collecting water from a Tivvy cooler into the TivvyBall is just fine. But, intentionally submerging the ball (even in a shallow tub) is not. The TivvyBall may rupture! It's the top-edge covering fabric, not the plastic inside, that causes all safety concerns. Be sure to use the TivvyBall only on dry, level ground. It is not meant to be used in water, and safety, please, please, please, do not drink from it. Spilling water, however, is fine. See the TivvyBall's Appendix.
