Petroianu,2021-11-29 Energy and power are fundamental concepts in electromagnetism and circuit theory as well as in optics signal processing power engineering electrical machines and power electronics However in crossing the disciplinary borders we encounter understanding difficulties due to 1 the many possible mathematical representations of the same physical objects and 2 the many possible physical interpretations of the same mathematical entities The monograph proposes a quantum and a relativistic approach to electromagnetic power theory that is based on recent advances in physics and mathematics The book takes a fresh look at old debates related to the significance of the Poynting theorem and the interpretation of reactive power Reformulated in the mathematical language of geometric algebra the new expression of electromagnetic power reflects the laws of conservation of energy momentum in fields and circuits The monograph offers a mathematically consistent and a physically coherent interpretation of the power concept and of the mechanism of power transmission at the subatomic mesoscopic level The monograph proves paraphrasing Heaviside that there is no finality in the development of a vibrant discipline power theory Being and Becoming Scientists Today Susan A. Kirch,Michele

Amoroso,2016-02-10 Can I contribute to science Do I like to work on the problems of science How do scientists know what they know Would I like to be become a scientist These are questions that interest new science students The authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning They argue that students are typically taught from a disciplinary perspective of science Using this lens students are viewed as people who need to learn a particular canon of information methods and ways of knowing about the world a perspective that may be

useful for practicing scientists but not ideal for young learners In this disciplinary approach to science education there is little room for development as a scientist In contrast the approach championed by Kirch and Amoroso places learner questions about the world at the forefront of teaching and learning and treats science as a system of human activity The historical explorations theoretical insights and practical advice presented here are appropriate for all ages and educational settings In *Being and Becoming Scientists* Today the authors provide new tools for thinking about science ideas for how to reveal the multiple stories of knowledge production to learners and approaches to teaching science as a collective process rather than a series of contributions made by famous individuals In these ways the authors promote the idea that all science learners contribute to the science in our lives
