Physics Briefs, 1979 **Not Zero** Ross Clark, 2023-02-02 Bravely

challenging the Establishment consensus forensically argued Mail on Sunday The British government has embarked on an ambitious and legally binding climate change target reduce the country's greenhouse gas emissions to Net Zero by 2050 The Net Zero policy was subject to almost no parliamentary or public scrutiny and is universally approved by our political class But what will its consequences be Ross Clark argues that it is a terrible mistake an impractical hostage to fortune which will have massive downsides Achieving the target is predicated on the rapid development of technologies that are either non-existent highly speculative or untested Clark shows that efforts to achieve the target will inevitably result in a huge hit to living standards which will clobber the poorest hardest and gift a massive geopolitical advantage to hostile superpowers such as China and Russia The unrealistic and rigid timetable it imposes could also result in our committing to technologies which turn out to be ineffective all while distracting ourselves from the far more important objective of adaptation This hard hitting polemic provides a timely critique of a potentially devastating political consensus which could hobble Britain's economy cost billions and not even be effective

students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy **All the Power in the World** Peter Unger,2007-11-19 In this book Unger attacks the commonly held idea that some qualities exist apart from the physical world and are more a matter of our perception such as colors Instead Unger argues that these qualities should be reconsidered as fundamentally physical He then uses this idea to reengage the basic issues of metaphysics **Fundamental Principles of Environmental Physics** Abel Rodrigues,Raul Albuquerque Sardinha,Gabriel Pita,2025-06-10 This book is an interdisciplinary guide to environmental physics grounded in sound mathematical formulation Its holistic approach allows readers to gain a more complete understanding of physical processes and their interactions with ecological ones which underpin important environmental issues The primary focus is on the atmospheric surface layer and topsoil layers This book interests researchers students agronomists foresters and urbanist engineers alike The book covers a wide range of topics within environmental physics including natural and anthropogenic canopies including forests urban or wavy terrains fundamentals of heat and mass transfer atmospheric flow dynamics eddy covariance and aerodynamic approaches for quantification of atmospheric fluxes global carbon budget soil water relationships climate change and the relevance of biochar as a global carbon sink Each chapter includes solved exercises numerous illustrations and tables This refreshed and updated edition also contains a new chapter on soil water relationships

Basic Physics Kenneth W Ford,2016-12-15 This reissued version of the classic text Basic Physics will help teachers at both the high school and college levels gain new insights into and deeper understanding of many topics in both classical and modern physics that are commonly taught in introductory physics courses All of the original book is included with new content added Short sections of the previous book 174 in number are labeled Features These Features are highlighted in the book set forth in a separate Table of Contents and separately indexed Many teachers will value this book as a personal reference during a teaching year as various topics are addressed Ford s discussions of the history and meaning of topics from Newton s mechanics to Feynman s diagrams although written first in 1968 have beautifully withstood the test of time and are fully relevant to 21st century physics teaching *The Lived Experience of Climate Change* Dina Abbott,Gordon Wilson,2015-04-22 This book explores the idea that daily lived experiences of climate change are a crucial missing link in our knowledge that contrasts with scientific understandings of this global problem It argues that both kinds of knowledge are limiting the sciences by their disciplines and lived experiences by the boundaries of everyday lives Therefore each group needs to engage the other in order to enrich and expand understanding of climate change and what to do about it Complemented by a rich collection of examples and case studies this book proposes a novel way of generating and analysing knowledge about climate change and how it may be used The reader is introduced to new insights where the book Provides a framework that explains the variety of simultaneous co existing and often contradictory perspectives on climate change Reclaims everyday experiential knowledge as crucial for meeting global challenges such as climate change Overcomes the

science citizen dichotomy and leads to new ways of examining public engagement with science Scientists are also human beings with lived experiences that filter their scientific findings into knowledge and actions Develops a public action theory of knowledge as a tool for exploring how decisions on climate policy and intervention are reached and enacted While scientists physical and social seek to explain climate change and its impacts millions of people throughout the world experience it personally in their daily lives The experience might be bad as during extreme weather engender hostility when governments attempt mitigation and sometimes it is benign This book seeks to understand the complex often contradictory knowledge dynamics that inform the climate change debate and is written clearly for a broad audience including lecturers students practitioners and activists indeed anyone who wishes to gain further insight into this far reaching issue

electrostatics and electro kinetics Science & Engineering Indicators ,2004 **Climate Change Justice** Eric A. Posner,David Weisbach,2010-02-22 A provocative contribution to the climate justice debate Climate change and justice are so closely associated that many people take it for granted that a global climate treaty should indeed must directly address both issues together But in fact this would be a serious mistake one that by dooming effective international limits on greenhouse gases would actually make the world s poor and developing nations far worse off This is the provocative and original argument of Climate Change Justice Eric Posner and David Weisbach strongly favor both a climate change agreement and efforts to improve economic justice But they make a powerful case that the best and possibly only way to get an effective climate treaty is to exclude measures designed to redistribute wealth or address historical wrongs against underdeveloped countries In clear language Climate Change Justice proposes four basic principles for designing the only kind of climate treaty that will work a forward looking agreement that requires every country to make greenhouse gas reductions but still makes every country better off in its own view This kind of treaty has the best chance of actually controlling climate change and improving the welfare of people around the world **Understanding Global Climate Change** Arthur P Cracknell,Costas A Varotsos,2021-07-27 Climate change a familiar term today is far more than just global warming due to atmospheric greenhouse gases including CO₂ In order to understand the nature of climate change it is necessary to consider the whole climatic system its complexity and the ways in which natural and anthropogenic activities act and influence that system and the environment Over the past 20 years since the first edition of Understanding Global Climate Change was published not only has the availability of climate related data and computer modelling changed but our perceptions of it and its impact have changed as well Using a combination of ground data satellite data and human impacts this second edition discusses the state of climate research today on a global scale and establishes a background for future discussions on climate change This book is an essential reference text relevant to any and all who study climate and climate change Features Provides a thought provoking and original approach to the science of climate Emphasises that there are many factors contributing to the causation of climate change Clarifies that while anthropogenic generation of carbon dioxide is important it is only one of several human activities contributing to climate change Considers climate change responses needed to be undertaken by politicians and society at national and global levels Totally revised and updated with state of the art satellite data and climate models currently in operation around the globe **Climate Change 2013: The Physical Science Basis** Intergovernmental panel on climate change. Working group 1,2014 The report also provides a comprehensive assessment of past and future sea level change in a dedicated chapter
