### Polymerase Chain Reaction

#### Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method, known as restriction fragment length polymorphism (RFLP), for identifying the crime scene DNA sample. First, we'll go to the subject matter explained in the text that this simulation may help to understand their goals.

#### Design Goal

After completing, you will go to the comprehensive knowledge the concepts of DNA, you will learn the usage of restriction enzymes, and this simulation may help the crime scene. It is up to you to make the correct response accurately the PCR experiment.

#### How the structure of DNA results explanation is offered

In the simulation, you will see the PCR experiment on the computer, which illustrates the structure of DNA and the explanation of the structure will be used throughout the experimental process. As well as an explanation of the PCR result.

#### Identify the molecule

In this PCR simulation, you will select your sample and other correct samples from the computer, and you will make response the polymerase chain reaction. This will be the structure of the structure.

#### Learning Objectives

In this PCR simulation, you will see the objectives:

1. Identify the structure of PCR polymerase chain reaction and structure.
2. Explain the PCR experiment using text, facts, and the correct use the structure.
