nature of cities in relation to the Anthropocene the proposed geological epoch of human induced changes to the Earth system
It charts an environmental history of curfews admonitions and alarms about dwelling on Earth Provisional cities are explored
as exemplary sites for thinking about living in this unsettled time Each chapter focuses on cities settlements or proxy
urbanisations including past disaster zones remote outposts in the present and future urban fossils The book explores the
dynamic changing and contradictory relationship between architecture and the global environmental crisis and looks at how
to re position architectural and urban practice in relation to wider intellectual environmental political and cultural shifts The
book argues that these rounder and richer accounts can better equip humanity to think through questions of vulnerability
