Expository Science: Forms and Functions of Popularisation T. Shinn, Richard P. Whitley, 2012-12-06 The prevailing view of scientific popularization both within academic circles and beyond affirms that its objectives and procedures are unrelated to tasks of cognitive development and that its pertinence is by and large restricted to the lay public Consistent with this view popularization is frequently portrayed as a logical and hence inescapable consequence of a culture dominated by science based products and procedures and by a scientific ideology On another level it is depicted as a quasi political device for channeling the energies of the general public along predetermined paths examples of this are the nineteenth century Industrial Revolution and the U S Soviet space race Alternatively scientific popularization is described as a carefully contrived plan which enables scientists or their spokesmen to allege that scientific learning is equitably shared by scientists and non scientists alike This manoeuvre is intended to weaken the claims of anti scientific protesters that scientists monopolize knowledge as a means of sustaining their social privileges Popularization is also sometimes presented as a psychological crutch This in an era of increasing scientific specialisation permits the researchers involved to believe that by transcending the boundaries of their narrow fields their endeavours assume a degree of general cognitive importance and even extra scientific relevance Regardless of the particular thrust of these different analyses it is important to point out that all are predicated on the tacit presupposition that scientific popularization belongs essentially to the realm of non science or

Matters of Life and Death John Cairns,2021-02-09 Cancer has become the scourge of the twentieth century It was always part of the human condition but until recently it was not a common cause of death because most people died from the infectious diseases Now that so many of us will live long enough to develop cancer we

need to learn as much about it as we can This requires some understanding of molecular biology John Cairns has made significant contributions to cancer research molecular biology and virology He believes that it is possible to explain what is known about cancer and about molecular biology in terms that are easily understood by people with little or no scientific training In this fascinating book he explores the revolution in public health the origins and principles of molecular biology and our emerging understanding of the causes of cancer Finally he discusses how these developments are likely to affect future generations As Cairns points out the last two hundred years have altered our life expectations beyond all recognition Even in the less developed nations of the world people are starting to believe that everyone ought to be able to live into old age and be protected from the major causes of premature death This change in our expectations is one of the major benefits of technology and the biological sciences But the resulting explosion in the human population ultimately threatens everything we have gained by scientific progress
