

Research Paper (Project #2)

The Case Study

"You see but you do not observe."
--Sherlock Holmes

Prompt: For project #2, you will write your own case study of an individual or small group that presents a problem you think recent research in neuroplasticity might effectively address. Your paper should do the following: 1) detail descriptions of the case subject and the problematic question it presents, including a brief overview of the standard response to this problem and its limitations; 2) analyze relevant developments, innovations or experiments in brain-based methods and concepts of brain plasticity that might help you formulate an alternative solution for your case's problem; and 3) make an original assertion about the implications of these approaches for this problem. While you may not be able to provide definitive results, your research should help you craft a well-reasoned argument supported with academic research.

Topic Selection: You are free to select a problem from the fields of education, music, sports, psychology, language acquisition, cultural studies, neurology, medicine, child development, disability studies or another discipline that you propose. You can find your individual or group from the media, your personal experiences or observations, your field of study, your hobbies or library research.

The Process: You will need to identify at least two *primary sources* that provide direct or firsthand evidence about your case. These can include eyewitness accounts, pieces of creative writing, literature, non-fiction, audio and video recordings, speeches, film, T.V. shows, interviews, fieldwork, essays, news reports and so on, i.e., wherever you gain an insightful view of the individual and the problem he or she presents. From these you can formulate a problematic question to guide your research. Consider the example of V.S. Ramachandran's argument about laughter, developed out of historical documents describing patients who died laughing. Since you are not conducting clinical observations, you need to distinguish early in your process between the sources that give you the information on your subject and that help you formulate a problematic question from the expertise that will help you analyze your subject and build an argument, your *secondary sources*.
