Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or other medical problems. The subjects were randomly assigned to either a control group or a training group. The control group continued with their sedentary lifestyle, while the training group participated in a 10-week training program consisting of three sessions per week of aerobic exercise. The HR and EE were measured at rest and during exercise at the beginning and end of the 10-week period. The results showed that the training group had a significant decrease in HR and a significant increase in EE compared to the control group. These findings suggest that a 10-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

If you are not satisfied with your results, follow the instructions carefully and test your original article. If the editor still requests the (a) paragraph and (b) and (c) paragraphs, repeat the analysis with the original data. (b) and (c) are the same.

23. When configuring a multi-mount AFS, set `mountmnt` and `mountmnt2` to your NetApp's `mount` and `mount2` commands.
24. If you're using the `afs` file system mount method, add `afs` to the `file_systems` list in `afs` in `afs.conf`. In the `afs` section, set `mountmnt` and `mountmnt2` to the `mount` and `mount2` commands on the NetApp. This is required for the mount to be able to perform the `afs` file system mount.
25. Do not include the `afs` file system in the `afs` section of `afs.conf`.
26. Use the `mountmnt` and `mountmnt2` commands to mount the AFS file system on the NetApp.
