

Lite 3000E

Frame Relay Option

Features

- Frame relay circuit installation testing
- Rapid in-service diagnostics and troubleshooting
- Frame relay service performance

Equipped with the Frame Relay option, the battery powered NetTest Lite 3000E is an easy-to-use, easily transportable test instrument for the installation, operation and maintenance of frame relay services on 2 Mbit/s lines. When equipped with the Data Interface Measurement option or the Basic Rate ISDN option, frame relay testing on these interfaces is also supported.

The Frame Relay option provides powerful tools for the turn up of frame relay lines through the simulation of frame relay data packets with user-defined characteristics. The measurement facilities provide essential information on the line quality. For in-service analysis and troubleshooting, the user has access to extensive frame relay statistics.

Fast and easy identification of multi time slot frame relay channels is achieved through the Frame Relay channel scan feature of the instrument.

LMI emulation test

In order to establish the logical configuration of the link, the instrument generates an LMI Status Enquiry Message, requesting "Full Status" at user-defined intervals. The response

Frame relay LMI information with LMI counts and sequence numbers for both sides of a Frame Relay line and status for up to 50 DLCIs.

from the network helps the installer to verify the correct set-up of activated DLCIs on the link concerned.

DLCI and LMI information

The instrument derives network information from the Full Status reports and presents it to the user, who is then able to see whether or not the network parameters are correct. The instrument also analyses the LMI Status messages on the line being monitored and presents the result in a way that enables the user to check that the basic surveillance of the frame relay connection is working properly.
