traditional methods such as firewalls and cryptography The Internet is omnipresent and companies have increasingly put critical resources online This has given rise to the activities of cyber criminals Virtually all organizations face increasing threats to their networks and the services they provide Intrusion detection systems IDSs take increased pounding for failing to meet the expectations researchers and IDS vendors continually raise Promises that IDSs are capable of reliably identifying malicious activity in large networks were premature and never tuned into reality While virus scanners and firewalls have visible benefits and remain virtually unnoticed during normal operations the situation is different with intrusion detection sensors State of the art IDSs produce hundreds or even thousands of alerts every day Unfortunately almost all of these alerts are false positives that is they are not related to security relevant incidents

Intrusion Detection and Correlation Challenges and Solutions analyzes the challenges in interpreting and combining i e correlating alerts produced by these systems In addition existing academic and commercial systems are classified their advantage and shortcomings are presented especially in the case of deployment in large real world sites
