Neurological and Neuropsychiatric Disorders Affecting Military Personnel and Veterans Mary Jo Pugh, William Walker, Venkatagiri Krishnamurthy, Lisa C. Krishnamurthy, Chen Lin, 2024-03-20 Active military personnel and Veterans of the military face unique neurologic and neuropsychiatric challenges unique to this population compared to the public. The military and Veteran population have faced traumatic experiences that lead to both physical and mental consequences. Amongst the important challenges unique to this population include traumatic brain injury, increased risk of neurological disorders such as dementia and stroke, and comorbid neuropsychiatric conditions. Unfortunately, many of these challenges also have a negative feedback loop such as brain injuries leading to post-traumatic stress disorder, which can increase the risk of Alzheimer's Dementia. Unfortunately, there are many gaps in knowledge to understand the unique challenges this population faces. There are many opportunities to improve our understanding of these challenges that military personnel and Veterans face. The goal of this Research Topic is to shine a light and improve understanding of these challenges. We aim to collect knowledge from the global network of researchers working on topics related to Neurological and Neuropsychiatric disorders affecting military personnel and Veterans. There are currently many gaps in the diagnosis, prevention, and treatment of conditions that affect this population disproportionately. This collection of work in the Frontiers in Neurology will give authors the opportunity to share with the global scientific community important research findings that address these gaps. For this collection, we are looking for submissions with topics that specifically address the unique challenges affecting military personnel and Veterans with Neurologic and Neuropsychiatric disorders.

Diagnostic Criteria in Neurology Alan J. Lerner, 2007-11-09 A compendium of the latest published diagnostic criteria for a diverse group of neurological conditions. The criteria cover a wide spectrum of neurological conditions whose diagnosis does not depend solely on histopathology, e.g., brain tumors, including cerebrovascular diseases, dementias, and behavioral disorders, demyelinating disorders, and disorders of consciousness and brain death. Standardized criteria are also provided for epilepsy, genetic syndromes, headache, immune-based disorders, infectious diseases, movement disorders, neuromuscular disorders, and sleep disorders. A dazzling array of tables summarizes useful information on both common and uncommon neurological conditions, including many genetic and pediatric neurological disorders. Innovative and authoritative *Diagnostic Criteria in Neurology* begins to do for neurology what the DSM Diagnostic and Statistical Manual did for psychiatry.
