Handbook of Digital Resources in Mathematics Education Birgit Pepin, Ghislaine Gueudet, Jeffrey Choppin, 2024-06-21 This handbook presents the state of the art scholarship on theoretical frames mathematical content learning environments pedagogic practices teacher professional learning and policy issues related to the development and use of digital resources in mathematics education With the advent of more and more open access digital resources teachers choose from the web what they see fit for their classroom students choose in the moment what they need for their projects and learning paths However educators and students often find it difficult to choose from the abundance of materials on offer as they are uncertain about their quality and beneficial use It is clear that at a time of bouleversement of the teaching learning processes it is crucial to understand the quality and the potentially transformative aspects of digital resources This book provides comprehensive analyses of and insights into the transformative aspects of digital resources [Amenability of Discrete Groups by Examples](#) Kate Juschenko, 2022-06-30 The main topic of the book is amenable groups i e groups on which there exist invariant finitely additive measures It was discovered that the existence or non existence of amenability is responsible for many interesting phenomena such as e g the Banach Tarski Paradox about breaking a sphere into two spheres of the same radius Since then amenability has been actively studied and a number of different approaches resulted in many examples of amenable and non amenable groups In the book the author puts together main approaches to study amenability A novel feature of the book is that the exposition of the material starts with examples which introduce a method rather than illustrating it This allows the reader to quickly move on to meaningful material without learning and remembering a lot of additional definitions and preparatory results those are presented after analyzing the main examples The techniques that are used for proving amenability in this book are mainly a combination of analytic and probabilistic tools with geometric group theory **Noncommutative Homological Mirror Functor** Cheol-Hyun Cho, Hansol Hong, Siu-Cheong Lau, 2021-09-24 View the abstract *Larisa Maksimova on Implication, Interpolation, and Definability* Sergei Odintsov, 2018-01-30 This edited volume focuses on the work of Professor Larisa Maksimova providing a comprehensive account of her outstanding contributions to different branches of non classical logic The book covers themes ranging from rigorous implication relevance and algebraic logic to interpolation definability and recognizability in superintuitionistic and modal logics It features both her scientific autobiography and original contributions from experts in the field of non classical logics Professor Larisa Maksimova s influential work involved combining methods of algebraic and relational semantics Readers will be able to trace both influences on her work and the ways in which her work has influenced other logicians In the historical part of this book it is possible to trace important milestones in Maksimova s career Early on she developed an algebraic semantics for relevance logics and relational semantics for the logic of entailment Later Maksimova discovered that among the continuum of superintuitionistic logics there are exactly three pretabular logics She

went on to obtain results on the decidability of tabularity and local tabularity problems for superintuitionistic logics and for extensions of S4 Further investigations by Maksimova were aimed at the study of fundamental properties of logical systems different versions of interpolation and definability disjunction property etc in big classes of logics and on decidability and recognizability of such properties To this end she determined a powerful combination of algebraic and semantic methods which essentially determine the modern state of investigations in the area as can be seen in the later chapters of this book authored by leading experts in non classical logics These original contributions bring the reader up to date on the very latest work in this field Official Gazette Philippines,2013 *Forthcoming Books* Rose Arny,1997 Paperbound Books in Print ,1971-07
