Biosemiotic Medicine Farzad Goli, 2016-08-02 This book presents an interpretation of pharmaceutical surgical and psychotherapeutic interventions based on a univalent metalanguage biosemiotics. It proposes that a metalanguage for the physical mental social and cultural aspects of health and medicine could bring all parts and aspects of human life together and thus shape a picture of the human being as a whole made up from the heterogeneous images of the vast variety of sciences and technologies in medicine discourse. The book adopts a biosemiotics clinical model of thinking because similar to the ancient principle of alchemy *tam ethice quam physice* everything in this model is physical as much as it is mental. Signs in the forms of vibrations molecules cells words images reflections and rites conform cultural mental physical and social phenomena. The book decodes healing dealing with health illness and therapy by emphasizing the first person experience as well as objective events. It allows readers to follow the energy information flows through and between embodied minds and to see how they form physiological functions such as our emotions and narratives.

Towards a Framework for Representational Competence in Science Education Kristy L. Daniel, 2018-06-20 This book covers the current state of thinking and what it means to have a framework of representational competence and how such theory can be used to shape our understanding of the use of representations in science education assessment and instruction. Currently there is not a consensus in science education regarding representational competence as a unified theoretical framework. There are multiple theories of representational competence in the literature that use differing perspectives on what competence means and entails. Furthermore dependent largely on the discipline language discrepancies cause a potential barrier for merging ideas and pushing forward in this area. While a single unified theory may not be a realistic goal

there needs to be strides taken toward working as a unified research community to better investigate and interpret representational competence An objective of this book is to initiate thinking about a representational competence theoretical framework across science educators learning scientists practitioners and scientists As such we have divided the chapters into three major themes to help push our thinking forward presenting current thinking about representational competence in science education assessing representational competence within learners and using our understandings to structure instruction
