

- c. Is this scenario an example of positive or negative feedback? Justify your reasoning using the words "stimulus" and "response."
- This is an example of negative feedback because the response is responsible for stopping the stimulus, or stopping the puppy from urinating on the couch.
6. Which of the feedback mechanisms in Model 1 would be most useful for amplifying a condition that is advantageous for the organism?
- The positive feedback mechanism would be the best option for amplifying the condition that is advantageous for the organism. This is due to the fact that a positive feedback will have a response that triggers the stimulus.
7. Which of the feedback mechanisms in Model 1 would be most useful for stopping a condition that is detrimental or limiting a condition to specified levels?
- Here it would be the contrary, a negative feedback mechanism. This is because it will stop or decrease the stimulus to specified levels.
8. Examine Model 2. Based on what you see in the model, propose a definition for "thermoregulation."
- Thermoregulation is when the body regulates its own temperature.
9. According to Model 2, what portion of the brain contains sensors that monitor body temperature?
- According to model 2, the hypothalamus is the part of the brain that contains sensors for monitoring the body temperature.
10. According to Model 2:
- What are two mechanisms the body uses to cool itself?
 - The two mechanisms that the body uses to cool itself is to first increase the sweat production; the blood vessels to the skin and that way the blood moves towards the skin and is able to lose heat outside the body.
 - What are two mechanisms the body uses to heat itself?
 - For the body to heat itself it generates shivers, this is through a muscle contraction. It also makes the blood move away from the skin and holds it inside of the body, generating the body a reaction of less heat radiated from the surface.
11. Consider the feedback loop that cools the body when it is too warm.
- Identify the "stimulus" and "response" in the feedback loop.
 - Stimulus: the temperature that is rising
 - Response: the sweating or the blood going towards the skin
 - Is this feedback loop positive or negative feedback? Justify your reasoning.
 - This is an example of negative feedback, because the stimulus is stopped as a consequence of the response
12. Consider the feedback loop that heats the body when it is too cold.
- Identify the "stimulus" and "response" in the feedback loop.
 - Stimulus: decreasing temperature
 - Response: shivering or the blood going away from the skin
