

Energy Transfer in Living Organisms

How does energy move through an organism?

Why?

The **law of conservation of energy** states that **energy can be neither created nor destroyed**; it can **only be transferred to another form**. In **living things energy is transferred as organic matter (molecules of carbohydrate, fats, starch, etc.)**. But does an organism use all of the energy that is provided by the organic matter available? How is the law of conservation of energy applied to living organisms?
