Points Lines Diagrams And Projects For The City:

Points and Lines Stan Allen, 1999 This text collates Stan Allen's writings and projects that propose architectural strategies for the contemporary city. It presents speculative texts outlining Allen's general principles with specific projects created by his office in an interplay of theory and practice. Projects include the Cardiff Bay Opera House, Wales; the Korean American Museum of Art, Los Angeles; the Museo del Prado, Madrid; and White Columns Gallery, New York. Each project is accompanied by explanatory text as well as drawings, models, photographs, and computer renderings.

Design Capital Sherry McKay, AnnaLisa Meyboom, 2022-07-29 Well-designed infrastructure brings social value that far exceeds its initial construction expenditure but competition for scarce government funds and a general public perception of infrastructure as mere efficiency has often left design ill-considered. This book provides designers with the tools needed to argue for the value of design, the design capital as the authors term it. In naming and defining design capital, design can once again become part of the discussion and realization of every infrastructure project. Design Capital offers strategies and tools for justifying public spending on design considerations in infrastructure projects. Design has the ability to make infrastructure resonate with cultural or social value as seen in the case studies which bestows infrastructure with the potential to accrue design capital. Support for this proposition is drawn from various methodologies of economic valuation and Bourdieu's theory of cultural capital, explanation of design methodology and education, and a series of historical and contemporary case studies. The book also addresses some of the more controversial outcomes associated with contemporary infrastructure: globalization and consumer tourism. With this book, designers can make a stronger case for the value of design in public infrastructure.

Proceedings of First National Conference on Sustainability in Built Environment

Aurora, 2020-01-07 Conference proceedings are a collection of technical papers presented at the First National Conference on Sustainability in Built Environment (NCSBE 2018) hosted by Aurora Group of Architecture Colleges, Hyderabad, Telangana.

Passages. Architecture for Flowing and Connecting Spaces Nicolò Chierichetti, Raffaella Cavallaro, 2025-09-01 Ceci n'est pas une conférence sur la mobilité. As infrastructures of movement often prioritize technical efficiency, they risk neglecting the qualitative and experiential dimensions of space, an oversight that architectural thinking is distinctively positioned to address. Architecture offers a special perspective to address this gap, particularly in light of SDG 09 Industry, Innovation and Infrastructures, and SDG 11 Sustainable Cities and Communities, and in reference to the principles of the EAAE Charter. By engaging with mobility through a transversal approach, the conference explores how architectural design can contribute to reimagining spaces, to overcome functionalist engineering limitations, also considering the ecological, climate, and social impacts of mobility spaces as something more than mere built objects. Through the examination of design methodologies and prototype case studies, the conference attempts to unveil the potential of architectural design and research tools to enrich unconventional discussions about mobility in urban and peri-urban contexts, its spatial configurations.

and experiential qualities Although mobility is intended as a framework the discourse will focus on the spaces above below in between and to the sides of the ordinary boundaries of architectures of flow as well as on the spaces of new forms of movement The conference Passages Architecture for Flowing and Connecting Spaces invited contributions which critically address the role of Architecture in the Shaping the spaces of mobility and in their interference around the sessions of Intersection Collateral and Evolution

Beyond the Edge Raymond Gastil, 2002-10-25 Through an insightful look at projects from around the world and at the current design proposals for New York itself the author paints a portrait of redevelopment that is both pragmatic and visionary one that holds the promise of reconnecting New Yorkers to their waterfront as a vital place of work and of public life

BOOK JACKET

Radical Inclusivity. Krzysztof Nawratek, 2015-05-12 The real strength of today's protest movements is not conflict but a reclaimed solidarity and newly rebuilt sense of community The real we are all in this together of people losing their homes jobs life savings and those who know how easily they can succumb to similar misfortune In the face of adversity the sense of community is reborn together with a selfless impulse to help Empathy and inclusiveness become key words A new community and the language it establishes emerge in cooperatives and movements working for the common good In this book we imagine the architecture and urbanism of this emerging community

Infrastructural Optimism Linda C. Samuels, 2021-09-29 Infrastructural Optimism investigates a new kind of twenty first century infrastructure one that encourages a broader understanding of the interdependence of resources and agencies recognizes a rightfully accelerated need for equitable access and distribution and prioritizes rising environmental diligence across the design disciplines Bringing together urban history case studies and speculative design propositions the book explores and defines infrastructure as the basis for a new form of urbanism emerging from the intersection of architecture landscape architecture and urban design In defining this new infrastructure the book introduces new dynamic and holistic performance metrics focused on measuring what matters over growth for the sake of growth and twelve criteria that define next generation infrastructure By shifting the focus of infrastructure our largest public realm to environmental symbiosis and quality of life for all design becomes a catalytic component in creating a more beautiful productive and optimistic future with Infrastructural Urbanism as its driver Infrastructural Optimism will be invaluable to design non profit and agency professionals and faculty and students in the fields of architecture landscape architecture and urban design working in partnership with engineers hydrologists ecologists urban planners community members and others who shape the built environment through the expanded field of infrastructure

Architecture in Abjection Zuzana Kovar, 2017-11-30 This book marks a turning point in architectural theory by using philosophy to examine the field anew Breaking from the traditional dualism within architecture which presents the body as subject and space as object it examines how such rigid boundaries can be softened Zuzana Kovar thus engages with complementary and complex ideas from architecture philosophy feminist theory and other subjects demonstrating how both bodies and bodily functions relate deeply

to architecture Extending philosopher Julia Kristeva's notion of abjection the confrontation of one's own corporeality as something is excreted Kovar finds parallels in the concept of the scaffold Much like living bodies and their products can impact on the buildings that house them old skin cells create dust menstrual blood stains our breath heats and cools surfaces scaffolding is similarly ephemeral and yet not entirely separable from the architecture it supports Kovar shifts the conversation about abjection towards a more nuanced idea of architecture where living organisms building matter space decay and waste are all considered as part of a continual process drawing on the key informing works of thinkers like Gilles Deleuze and Felix Guattari to do this Including a number of experimental projects conducted in the spaces inhabited by the author herself to illuminate the theory at its core the book forms a distinguished and pioneering study designed for practitioners and scholars of architecture philosophy and visual culture alike

Ugly, Useless, Unstable Architectures Miguel Paredes Maldonado, 2019-11-04 Ugly Useless Unstable Architectures traces productive intersections between architecture and the discourses of Post Structuralism and New Materialism It investigates how their unique ontological regimes can be mobilised to supersede the classical framework that still informs both the production and the evaluation of architecture Throughout its three main chapters this enquiry challenges one of the most prevalent tropes of architectural assessment Beauty Utility and Stability Author Miguel Paredes Maldonado critically unpacks the spatial and operational qualities of these three idealised concepts before setting out an

alternative framework of spatial practice that draws from Gilles Deleuze's post structuralist take on the production of the real and Manuel DeLanda's model based branch of New Materialism. This book reads and situates a series of spatial works through the lens of this critical methodology to contest the conceptual aspects traditionally underpinning architectural value. It posits that architecture can operate as a continuous generative spectrum encompassing a broad range of potential configurations. Written for academics and students in architectural theory design and contemporary philosophical thought alike, this book should appeal to a wide audience.

Interpreting Site Genevieve Baudoin, 2015-04-17. Interpreting Site explains the basic methods architects use to translate what you perceive to represent the complex conditions that physically and mentally construe a site, helping to shape the ultimate design. Within each of the four themes defining site: experiencing site, spatializing site, and systematizing site, theoretical, conceptual, and analytic methods and representational tools are introduced to give you a foundation to develop your own approach to the conditions of a site. Author Genevieve S. Baudoin examines longstanding representation methods in relation to emerging and experimental methods, offering an idiosyncratic and provocative look at different approaches. Four highly illustrated full colour case studies of key contemporary projects in Spain, the United States, the United Kingdom, and Norway demonstrate how architects have used conditions discovered on a site in their final design.

Toyo Ito Jessie Turnbull, 2012-08-10. The work of Japanese architect Toyo Ito explores the dynamic relationship between buildings and their environments. His principal focus is on developing an architecture free of the grid system, which he believes homogenizes people and their lives. Toyo Ito: Forces of Nature documents the architect's 2009 Kassler lecture at the Princeton University School of Architecture. Told primarily in Ito's own voice, the book features the edited lecture transcript as well as an interview with the architect by Julian Worrall and a new translation of Ito's 1980 essay The Projection of the Profane World onto the Sacred. Projects illustrated in the book include Berkeley Art Museum and Pacific Film Archive, unbuilt Taichung Opera House, Tama Art University Library, and Kakamigahara Crematorium. Bringing together different strands of a long and fruitful career, Toyo Ito: Forces of Nature concludes with an afterword by Ito that addresses the exhibition Home for All, a response to Japan's earthquake and tsunami disasters in March 2011.

Residential Architecture as Infrastructure Stephen H. Kendall, 2021-11-29. This edited collection provides an up to date account by a group of well informed and globally positioned authors of recently implemented projects, public policies, and business activities in Open Building around the world. Countless residential Open Building projects have been built in a number of countries, some without knowledge of the original theory and methods. These projects differ in architectural style, building industry methods, economic system, and social aims. National building standards and guidelines have been promulgated in several countries: Finland, China, Japan, Korea, providing incentives and guidance to Open Building implementation. Businesses in several countries have begun to deliver advanced FIT/OUT systems both for new construction and for retrofitting existing buildings, demonstrating the economic advantages of the responsive independent dwelling. This book also argues that the

open building approach is essential for the reactivation of the existing building stock for long term value because in the end it costs less The book discusses these developments in residential architecture from the perspective of an infrastructure model of built environment This model enables decision makers to manage risk and uncertainty while avoiding a number of problems often associated with large fast moving projects such as separation and distribution of design tasks and responsibility and the ensuing boundary frictions Residential Architecture as Infrastructure adds to the Routledge Open Building Series and will appeal to architects urban designers researchers and policy makers interested in this international review of current projects policies and business activities focused on Open Building implementation

The Urbanism of Metabolism Raffaele Pernice, 2022-03-16 This edited book explores and promotes reflection on how the lessons of Metabolism experience can inform current debate on city making and future practice in architectural design and urban planning More than sixty years after the Metabolist manifesto was published the author's original contributions highlight the persistent links between present and past that can help to re imagine new urban futures as well as the design of innovative intra urban relationships and spaces The essays are written by experienced scholars and renowned academics from Japan Australia Europe South Korea and the United States and expose Metabolism's special merits in promoting new urban models and evaluate the current legacy of its architectural projects and urban design lessons They offer a critical intellectual and up to date account of the Metabolism projects and ideas with regard to the current evolution of architectural and urbanism discourse in a global context The collection of cross disciplinary contributions in this volume will be of great interest to architects architectural and urban historians as well as academics scholars and students in built environment disciplines and Japanese cultural studies
