

## Sample Paper in Econometrics

This is a sample research paper for an introductory course in econometrics. It shows how to communicate econometric work in written form. The paper integrates many writing instructions and rules into a single example and shows how they all fit together. You should pay attention to the structure of the paper: how it is divided into sections and how each section serves a distinct purpose. You should also note how the descriptive statistics and empirical results are presented.

The paper includes numerous notes in the margins. These notes explain the purpose of each paragraph, and provide comments on tables and other aspects of the paper. The margin notes are there to make you aware of the writing process. They are designed to help you bridge the gap between reading and understanding on one hand, and writing and creating knowledge on the other. The readings which have been assigned in your economics courses are finished products which you are able to read and understand. However, in order for you to be able to create a finished product yourself, you need to become aware of how such a product is created. The notes in the margins reveal the thinking and consideration that go into each section, paragraph and table, and should therefore help you in writing your own paper.

It is worth emphasizing that you should use this paper only as a guide. You should not copy the paper and simply fill in your own names, words and numbers. You can deviate from the order and purpose of each paragraph in order to meet the needs of your own work. You can add separate sections on prior literature, methodology or theory. Such sections would normally come after the introduction. The sample paper includes the discussion of prior literature in the introduction. The theory and methodology are folded into the Introduction, Data and Empirical Results sections. The absence of a separate theory or methodology sections is not uncommon in applied empirical papers. However, theory or methodology sections are a must when the empirical question is derived from an explicit theoretical model or when the methodology requires a longer explanation. You are also welcome to include additional tables or graphs. What should remain the same, though, is that each section, paragraph, table and graph has a purpose, and that they are organized in a logical manner.

Concepts illustrated in the paper	
<p><b>Structure:</b></p> <ul style="list-style-type: none"><li>• <b>Introduction</b> (<a href="#">see example</a>)<ul style="list-style-type: none"><li>◦ The introduction should convey four things. First, what is the question that the paper asks. Second, why is the question important. Third, how is the paper going to answer the question. Finally, how is the paper related to existing work. The introduction is the most important part of any paper. No one will continue to read any further if the introduction is confusing or poorly written.</li></ul></li><li>• <b>Data</b> (<a href="#">see example</a>)<ul style="list-style-type: none"><li>◦ The Data section should accomplish three things. First, state the sources of data. Second, discuss the variables used and how they relate to the concepts that they are supposed to measure. Finally, present the data's descriptive statistics.</li></ul></li><li>• <b>Empirical Results</b> (<a href="#">see example</a>)<ul style="list-style-type: none"><li>◦ The Empirical Results section should present and discuss the empirical results. The presentation of results is usually done with a table. *Selected Papers Of Lawrence R Klein: Theoretical Reflections And Econometric Applications* Kanta Marwah, 1997-06-01

This volume contains selected papers of Lawrence R Klein in economics econometric theory and applications in modeling forecasting macroeconomic analysis international economics and public policy Nobel Laureate Lawrence Klein's bibliography spans a half century including books articles and chapters in conference proceedings festschriften and thematic books One such volume of solely scientific collections mainly from his relatively early articles has already been published The present volume is different it includes some articles but largely chapters or book excerpts that were mostly written since 1980 the approximate cut off date of the prior volume and the year of his Nobel Prize Also it includes things that were published in very limited or obscure editions Thus it provides a more complete picture of his scholarly career and his current reflections on the state of economic science All these writings are in the vanguard of thinking about economics in a global domain The thirty five plus selections are organized in five parts by major themes An editorial commentary introduces each part The introductory chapters include Klein's autobiographical research commentary and his professional life philosophy

Handbook of Econometrics Zvi Griliches, Michael D. Intriligator, 1983 The Handbook is a definitive reference source and teaching aid for econometricians It examines models estimation theory data analysis and field applications in econometrics Comprehensive surveys written by experts discuss recent developments at a level suitable for professional use by economists econometricians statisticians and in advanced graduate econometrics courses

*Essays in Panel Data Econometrics* Marc Nerlove, 2005-11-10

This volume collects seven of Marc Nerlove's previously published classic essays on panel data econometrics written over the past thirty five years together with a cogent essay on the history of the subject which began with George Biddell Airey's monograph published in 1861 Since Professor Nerlove's 1966 *Econometrica* paper with Pietro Balestra panel data and methods of econometric analysis appropriate to such data have become increasingly important in the discipline The principal factors in the research environment affecting the future course of panel data econometrics are the phenomenal growth in the computational power available to the individual researcher at his or her desktop and the ready availability of data sets both large and small via the Internet The best way to formulate statistical models for inference is motivated and shaped by substantive problems and understanding of the processes generating the data at hand to resolve them The essays illustrate both the role of the substantive context in shaping appropriate methods of inference and the increasing importance of computer intensive methods

encountered by professionals and practitioners Draws on up to date research in areas not covered by standard econometrics texts Organized to provide clear accessible information and point to further readings    **Continuous-Time Econometrics**  
G. Gandolfo,2012-12-06 Continuous time econometrics is no longer an esoteric subject although most still regard it as such so much so that it is hardly mentioned in standard textbooks on econometrics Thanks to the work done in the last 20 years both the theoretical and the applied side are by now well developed Methods of estimation have been theoretically elaborated and practically implemented through computer programs Continuous time macroeconomic models for different countries have been constructed estimated and used Being myself involved in these developments it was with great pleasure that I accepted the invitation to organize a session on continuous time econometrics in the context of the International Symposium on Economic Modelling jointly organized by the University of Urbino and the book series International Studies in Economic Modelling and co sponsored by the Consiglio Nazionale delle Ricerche The reaction of continuists from all over the world was so enthusiastic that I was able to arrange two sessions one on the theory and the other on the applications The symposium was held in Urbino on 23 25 July 1990 The papers presented in Urbino have been revised in the light of the discussion at the symposium and the referees comments Hence what is published here should become another standard reference in the field of continuous time econometrics    **Panel Data Econometrics** Badi H. Baltagi,2006-04-01 This volume includes some of the papers presented at the 11th International Conference on Panel Data Texas June 2004 and other solicited papers that passed the refereeing process and includes such topics as dynamic panel data estimation non linear panel data methods and the phenomenal growth in non stationary panel data econometrics    **Contributions to**

A. Phillips,Elias Tzavalis,2007-02-01 The small sample properties of estimators and tests are frequently too complex to be useful or are unknown Much econometric theory is therefore developed for very large or asymptotic samples where it is assumed that the behaviour of estimators and tests will adequately represent their properties in small samples Refined asymptotic methods adopt an intermediate position by providing improved approximations to small sample behaviour using asymptotic expansions Dedicated to the memory of Michael Magdalinos whose work is a major contribution to this area this book contains chapters directly concerned with refined asymptotic methods In addition there are chapters focusing on new asymptotic results the exploration through simulation of the small sample behaviour of estimators and tests in panel data models and improvements in methodology With contributions from leading econometricians this collection will be essential reading for researchers and graduate students concerned with the use of asymptotic methods in econometric analysis [Advances in Econometrics](#) Miroslav Verbić,2011-07-27 Econometrics is becoming a highly developed and highly mathematicized array of its own sub disciplines as it should be as economies are becoming increasingly complex and scientific economic analyses require progressively thorough knowledge of solid quantitative methods This book thus provides recent insight on some key issues in econometric theory and applications The volume first focuses on three recent advances in econometric theory non parametric estimation instrument generating

functions and seasonal volatility models Additionally three recent econometric applications are presented continuous time duration analysis panel data analysis dealing with endogeneity and selectivity biases and seemingly unrelated regression analysis Intended as an electronic edition providing immediate open access to its content the book is easy to follow and will be of interest to professionals involved in econometrics
