technologies Based on their long industrial and academic experience Stefan Jablonski and his coauthors provide a framework architecture for Web applications which helps choose the best strategy for a given project The authors classify common technologies and standards like NET CORBA J2EE DCOM WSDL and many more with respect to platform architectural layer and application package and guide the reader through a three phase development process consisting of preparation design and technology selection steps The whole approach is exemplified using a real world case the architectural design of an order entry management system **Agile Java Development with Spring, Hibernate and Eclipse** Anil Hemrajani,2006-05-09 Agile JavaTM Development With Spring Hibernate and Eclipse is a book about robust technologies and effective methods which help bring simplicity back into the world of enterprise Java development The three key technologies covered in this book the Spring Framework Hibernate and Eclipse help reduce the complexity of enterprise Java development significantly Furthermore these technologies enable plain old Java objects POJOs to be deployed in light weight containers versus heavy handed remote objects that require heavy EJB containers This book also extensively covers technologies such as Ant JUnit JSP tag libraries and touches upon other areas such as such logging GUI based debugging monitoring using JMX job scheduling emailing and more Also Extreme Programming XP Agile Model Driven Development AMDD and refactoring are methods that can expedite the software development projects by reducing the amount of up front requirements and design hence these methods are embedded throughout the book but with just enough details and examples to not sidetrack the focus of this book In addition this book contains well separated subjective material opinion sidebars comic illustrations tips and tricks all of which provide real world and practical perspectives on relevant topics Last but not least this book demonstrates the complete lifecycle by building and following a sample application chapter by chapter starting from conceptualization to production using the technology and processes covered in this book In summary by using the technologies and methods covered in this book the reader will be able to effectively develop enterprise class Java applications in an agile manner **Scientific Software Design** Damian Rouson,Jim Xia,Xiaofeng Xu,2011-04-29 The authors analyze how the structure of a package determines its developmental complexity according to such measures as bug search times and documentation information content The work presents arguments for why these issues impact solution cost and time more than does scalable performance The final chapter explores the question of scalable execution and shows how scalable design relates to scalable execution The book s focus is on program organization which has received considerable attention in the broader software engineering community where graphical description standards for modeling software structure and behavior have been developed by computer scientists These discussions might be enriched by engineers who write scientific codes This book aims to bring such scientific programmers into discussion with computer scientists The authors do so by introducing object oriented software design patterns in the context of scientific simulation **NET** Gunther Lenz,Thomas Moeller,2004 bull There are many books on Software Engineering and many books on NET but this is the first

to bring them together bull The authors use an extended case study with each chapter building on the previous one involving readers at every stage bull By the end the reader has created a really cool working imaging application while learning best practices of software development in NET **Graph Drawing** Guiseppe Liotta,2004-03-04 The 11th International Symposium on Graph Drawing GD 2003 was held on September 21 24 2003 at the Universit a degli Studi di Perugia Perugia Italy GD 2003 attracted 93 participants from academic and industrial institutions in 17 countries In response to the call for papers the program committee received 88 re larsubmissionsdescribingoriginalresearchand orsystemdemonstrations Each submission was reviewed by at least 4 program committee members and c ments were returned to the authors Following extensive e mail discussions the program committee accepted 34 long papers 12 pages each in the proceedings and 11 short papers 6 pages each in the proceedings Also 6 posters 2 pages each in the proceedings were displayed in the conference poster gallery In addition to the 88 submissions the program committee also received a submission of special type one that was not competing with the others for a time slot in the conference program and that collects selected open problems in graph drawing The aim of this paper which was refereed with particular care andUNCHANGEDtworoundsofrevisions istostimulatefutureresearchinthe graph drawing community The paper presents 42 challenging open problems in di erentareasofgraphdrawingandcontainsmorethan120references Although the length of the paper makes it closer to a journal version than to a conference extended abstract we decided to include it in the conference proceedings so that it could easily reach in a short time the vast majority of the graph drawing community **Electronic Design Automation for IC System Design, Verification, and Testing** Luciano Lavagno,Igor L.
