Power System Operations and Electricity Markets Fred I. Denny,David E. Dismukes,2017-12-19 The electric power industry in the U S has undergone dramatic changes in recent years Tight regulations enacted in the 1970 s and then de regulation in the 90 s have transformed it from a technology driven industry into one driven by public policy requirements and the open access market Now just as the utility companies must change to ensure their survival engineers and other professionals in the industry must acquire new skills adopt new attitudes and accommodate other disciplines *Power System Operations and Electricity Markets* provides the information engineers need to understand and meet the challenges of the new competitive environment Integrating the business and technical aspects of the restructured power industry it explains clearly and succinctly how new methods for power systems operations and energy marketing relate to public policy regulation economics and engineering science The authors examine the technologies and techniques currently in use and lay the groundwork for the coming era of unbundling open access power marketing self generation and regional transmission operations The rapid massive changes in the electric power industry and in the economy have rendered most books on the subject obsolete Based on the authors years of front line experience in the industry and in regulatory organizations *Power System Operations and Electricity Markets* is current insightful and complete with Web links that will help readers stay up to date **Intelligent Automatic Generation Control** Hassan Bevrani,Takashi Hiyama,2017-12-19 Automatic generation control AGC is one of the most important control problems in the design and operation of interconnected power systems Its significance continues to grow as a result of several factors the changing structure and increasing size complexity and functionality of power systems the rapid emergence and uncertainty of renewable energy sources developments in power generation consumption technologies and environmental constraints Delving into the fundamentals of power system AGC *Intelligent Automatic Generation Control* explores ways to make the infrastructures of tomorrow smarter and more flexible These frameworks must be able to handle complex multi objective regulation optimization problems and they must be highly diversified in terms of policies control strategies and wide distribution in demand and supply sources all via an intelligent scheme The core of such intelligent systems should be based on efficient adaptable algorithms advanced information technology and fast communication devices to ensure that the AGC systems can maintain generation load balance following serious disturbances This book addresses several new schemes using intelligent control techniques for simultaneous minimization of system frequency deviation and tie line power changes which is required for successful operation of interconnected power systems It also concentrates on physical and engineering aspects and examines several developed control strategies using real time simulations This reference will prove useful for engineers and operators in power system

planning and operation as well as academic researchers and students in field of electrical engineering

Maintenance Scheduling in Restructured Power Systems M. Shahidehpour, M. Marwali, 2012-12-06 The overall goal of this book is to introduce algorithms for improving the economic posture of a utility company in a restructured power system by promoting cost effective maintenance schedules Today cutting operations and maintenance O M costs and preserving service reliability are among the top priorities for managers of utility companies Preventive maintenance is perhaps the single largest controllable cost of a utility's operation It is perceived that a careful planning and a good coordination among self interested entities in a restructured power system are essential to achieving an optimal trade off between the cost of maintenance and the service reliability Traditional maintenance programs in vertically integrated utilities relied heavily on time directed maintenance and manufacturer recommendations This book offers a logical alternative to traditional electric utility maintenance practices and a basis for maintenance decisions The book is organized as follows Chapter I reviews various issues related to the power system operation and presents the role of restructuring in maintenance scheduling In Chapter II fundamental topics related to linear and nonlinear systems are reviewed The duality in linear programming is discussed and integer programming is reviewed Benders decomposition Lagrangian relaxation and Dantzig Wolfe decomposition are presented Several examples are given to demonstrate the applications of different methods The formulation of reactive power optimization is discussed which will be used again in Chapter VII
