

to occur in this area, a person might lose their ability to perform math tasks, as well as lose the ability to visualize conceptually and literally.

The medulla oblongata is located on the bottom half of the brain stem. The brain stem is the part of the brain, which connects the main part of the brain mass to the spinal cord serving as the connection between the nervous system and the rest of the body. The medulla oblongata is sometimes termed "little brain" due to its high importance to physiological functioning. This is an extremely vital part of the brain because it controls all the physiological responses and conditions that we are unaware of such as blood pressure, heart rate, oxygen consumption, etc. Due to this fact, if any damage is done to this area, these physiological processes would become compromised and a person's life would be in immediate danger. Death would eventually follow if the damage were unable to be repaired (Johnson, 2009).

Damage to different parts of the brain results in different types of effects. The aspects of how this damage effects processing are still not completely known. Brain scans are useful in helping to determine which part of the brain is effected such as through blood flow, dyes, etc. By understanding how the brain works and is wired, medical practitioners and neurologists can find better ways of treating damage to the brain once it's done and developing surgical ways of correcting the damage.

From Brain to Body: The Impact of Nervous System Declines on Muscle Performance in Aging Brian C. Clark,Timothy D. Law Sr.,S. Lee Hong,2015-12-18 Download PDF Download EPUB The deterioration of skeletal muscle performance e g declines in muscle strength and motor performance with advancing age has long been anecdotally recognized as Shakespeare pointed out nearly a half millennium ago in his monologue The Seven Ages of Man and has been of scientific interest for well over a century Over the past several decades the scientific and medical communities have recognized that reduced skeletal muscle performance is a debilitating and life threatening condition in the elderly For example the age associated loss of muscle strength as well as impairment in the ability to finely control movement is highly associated with physical disability and difficulty performing activities of daily living While the nervous system is widely recognized for its role in controlling skeletal muscle during motor function its role in determining the performance characteristics of aged skeletal muscle has largely been understudied Historically it was believed that these reductions in muscle performance were primarily resultant of age associated adaptations in skeletal muscle e g muscle atrophy However aging is associated with widespread qualitative and quantitative changes in both the central and peripheral nervous systems that are likely to influence numerous aspects of muscle performance such as muscle strength fatigue and motor control as well as mobility In this research topic we sought to examine a broad range of issues surrounding 1 the age related changes in nervous system anatomical physiological and biochemical changes in the central and or peripheral nervous systems 2 the functional role of these nervous system changes in contributing to altered skeletal muscle performance and or mobility and 3 physical and pharmacologic interventions that act via the nervous system to enhance muscle performance and or mobility Researchers and academicians engaged in aging neuroscience and or applied physiology research focused within the scope of this

The Major Discoveries of Cajal and His Disciples: Consolidated Milestones for the Neuroscience of the XXIst Century Fernando de Castro, Miguel A. Merchán, 2017-04-25 When Santiago Ramon y Cajal started to unravel the fine structure of the nervous system in the last decades of the XIXth century maybe only his unbeatable soul of brave Spaniard imagined that most of the descriptions were scientific truths that lasted to date Simple histological stainings curiosity to ameliorate these monocular microscopes patience for drawing his observations and a rich imaginative open mind this is the recipe for Cajal success His descriptions of connectivity in the nervous system compiled in Cajal's opus magna published in 1904 *Textura del sistema nervioso del hombre y los vertebrados* and 1911 *Histologie du système nerveux* have been corroborated by modern techniques decade after decade Even more the main hypothesis that Cajal raised are universally recognised as biological laws today the neuron theory the law on the dynamic polarization of the neuron and the chemotropic hypothesis That is the nervous system is not a syncytial network but is formed by individual cells the transmission of the nerve impulses follow a main direction within a given neuron the axons are guided by chemical substances in a chemotropic way till form synapses with their targets Attracted by Cajal's strong personality and scientific success a number of medical students and doctors join him in the crusade to explore the nervous system And the seed planted by the universal savant was really successful Francisco Tello described interesting aspects of the regeneration of peripheral nerves which are very useful for neuroscientist currently working in this topic Nicolás Achúcarro significantly contributed to study neuroglia and future microglia Pío del Río Hortega identified two out of the four main nervous cell types the oligodendrocytes and microglia and proposed an almost still valid classification for the CNS tumours Fernando de Castro made was the first description of arterial chemoreceptors in the carotid body Rafael Lorente de N was a dominant figure of Neuroscience for decades after the IInd World War first describing the columnar organization of the cerebral cortex well before Mountcastle Hubbel and Wiesel Even less recognised co workers and disciples of Cajal his brother Pedro Ramon y Cajal Domingo Sánchez the neurologist Rodríguez Lafora protagonised discoveries that are consolidated scientific truths today Altogether it is difficult if not impossible to find a school in biology contributing in such a fundamental and varied way to the common acervo like the collectively known as Cajal School or Spanish Neurological School Although the particular way to work of the Maestro selecting a pleiade of brilliant collaborators with whom accomplish such a titanic feat giving them freedom for their studies has been recognised and confronted to antagonic systems followed by other relevant scientists and scientific schools the general recognition of such a significant major milestones for Neuroscience and their vigency in the well marched XXIst century is not this is the purpose of this Ebook to remind all these examples of how successful can be the scientific work
