Spiking Neuron Models Wulfram Gerstner, Werner M. Kistler, 2002-08-15 Neurons in the brain communicate by short electrical pulses the so called action potentials or spikes How can we understand the process of spike generation How can we understand information transmission by neurons What happens if thousands of neurons are coupled together in a seemingly random network How does the network connectivity determine the activity patterns And vice versa how does the spike activity influence the connectivity pattern These questions are addressed in this 2002 introduction to spiking neurons aimed at those taking courses in computational neuroscience theoretical biology biophysics or neural networks The approach will suit students of physics mathematics or computer science it will also be useful for biologists who are interested in mathematical modelling The text is enhanced by many worked examples and illustrations There are no mathematical prerequisites beyond what the audience would meet as undergraduates more advanced techniques are introduced in an elementary concrete fashion when needed

Computational Neuroscience: Realistic Modeling for Experimentalists Erik De Schutter, 2000-11-22. Designed primarily as an introduction to realistic modeling methods, *Computational Neuroscience: Realistic Modeling for Experimentalists* focuses on methodological approaches, selecting appropriate methods and identifying potential pitfalls. The author addresses varying levels of complexity from molecular interactions within single neurons to the processing of information by neural networks. He avoids theoretical mathematics and provides just enough of the basic math used by experimentalists. What makes this resource unique is the inclusion of downloadable resources that furnish interactive modeling examples. It contains tutorials and demos, movies and images, and the simulation scripts necessary to run the full simulation described in the chapter examples. Each chapter covers the theoretical foundation, parameters needed, appropriate software, descriptions, evaluation of the model, future directions, expected examples in text boxes linked to the downloadable resources and references. The first book to bring you cutting edge developments in neuronal modeling. It provides an introduction to realistic modeling methods at levels of complexity varying from molecular interactions to neural networks. The book and downloadable resources combine to make *Computational Neuroscience: Realistic Modeling for Experimentalists* the complete package for understanding modeling techniques.

Complexity in Biological Information Processing Gregory R. Bock, Jamie A. Goode, 2001-08-30. Many human diseases arise from the malfunction of signalling components in particular alterations of multiple components of an integrated signalling network. Experimental and computational tools to describe and quantify these changes are increasingly available, providing a wealth of data that can stimulate systematic analysis of the entire signalling network and enable prediction of disease states not easily recognizable from complex data sets. This groundbreaking book explores the structural and temporal complexity in biological signalling exemplified in neuronal, immunological, humoral and genetic signal transduction networks. With discussions between experimentalists and theoretically oriented scientists, this book takes an interdisciplinary approach that may help switch the analysis of biological signalling from descriptive to predictive science and capture the behaviour of entire systems. Explores the structural and temporal complexity in biological signalling. Represents an unusual collocation of three different areas: immunology, cell signalling and neural networks. Contains interdisciplinary discussions between experimentalists and theoretically oriented scientists, in particular those working on computer simulations.
