Neuropsychotherapy Theoretical Underpinnings And Clinical Applications:

Neuropsychotherapy Pieter Rossouw, 2014-10-27 In this book Pieter Rossouw and his colleagues have made a wonderful and exciting contribution to the world of psychology psychotherapy and counselling by bringing into practical reality the importance of an integrative approach to the psychosocial care of others The book presents a ground breaking new integrated model of neuropsychotherapy based on years of research clinical practice and teaching in the neuropsychotherapy field Dr Rossouw s integrated model of neuropsychotherapy develops and enhances the theoretical work of Seymour Epstein and Klaus Grawe and recognises that safety in the therapeutic alliance is a core component and guiding tenet of a neuropsychotherapeutic approach Through the principles of neuroscience the book takes us on a challenging yet exciting journey exploring the application of brain based therapies Section A of the book chapters 1 2 and 3 reviews the development through history of how neuroscience has informed schools of psychology and therapeutic approaches and critiques existing theoretical constructs Section B the remaining 17 chapters offers a series of case studies written by practising clinicians from across Australia in varying clinical settings and the application of a neuropsychotherapeutic approach and principles for a wide range of psychopathologies This book is the culmination of a significant interest in and passion for engaging with people suffering from a range of mental challenges It is also the result of a passion for understanding the human brain and how our genetic footprint is expressed through engaging with the environment It is this interaction that leads to genetic expression and in safe enriched environments leads to healthy neural development and the capacity not only to survive the challenges of life but also to thrive When survival is compromised changes in the brain occur These changes express on a neurochemical and neuro structural level and alter neural networks and can lead to the onset of psychopathology This book challenges our science our art and perhaps most importantly of all our humanity For years in the real world clinicians have known the value of an holistic integrative approach but often only whispered words like eclectic and holistic and integrative in describing their practice for fear of being ridiculed for lacking a purist psychological doctrine This book offers real validation to the care that people had known to always work and Dr Rossouw and his colleagues deserve the thanks of many many practitioners for giving strength and confidence and structure to their practice The view of human distress as a disease to be treated by experts is placed aside in recognising the power of human beings and their minds to heal and grow and change within a place of safety to be found in the sanctuary of the therapeutic setting Dr Rossouw and his colleagues have helped to return the people who deserve our care to the centre of healing where they belong They have placed them there along with the wonder of relationship and connection Dr Rossouw is constantly mindful of so many people that suffer on a daily basis with various presentations of mental distress This book is ultimately for every one of them Dr Rossouw s hope is that this volume will open some new insights and pathways for clinicians to engage with their clients in such a way that the theoretical underpinnings and clinical applications of neuropsychotherapy will open new perspectives

and facilitate new neural pathways to thrive and enhance quality of life

I-Power George Dieter, 2015-08-25 We all too often look for happiness and contentment via relationships success and recognition all things that lie outside ourselves Underpinned by Boundary Theory this book illustrates why this approach is actually at the heart of why we end up experiencing unhappiness and discontent By learning to approach life with a boundary focus we discover that nobody can make us feel or do anything only we are responsible for how we feel We also become able to switch our rational brain on and our emotional brain off when making decisions or facing challenges And we are far better placed to minimise stress By implementing boundaries so that we take responsibility only for ourselves we will find ourselves able to lessen interpersonal conflict and greatly enhance our feelings of contentment fulfilment and balance

Neuropsychotherapy and Community Integration Tedd Judd, 2012-12-06 The first time I walked onto a neurology ward during my graduate training I was shocked much as family members of people with brain illnesses probably are I had learned a great deal in class about aphasia amnesia agnosia apraxia and other cognitive disorders but I had not been prepared for the behavioral disorders I was to encounter for the severe physical disabilities for the indignities of the patient role Bit by bit I overcame this shock I learned to look people in the eye who seemed to have more tubes than the New York subway system people whose faces had been scraped off the pavement and who were drooling incontinent and severely dysarthric I learned to see beyond what frightened and repulsed me to the human beings within I wish I could say that I saw in each person a deep human soul yearning to breathe free and to love an essence an intrinsic goodness a wholeness I did not Rather it seems like each and every unique element of human behavior one's abilities and one's desires can be destroyed by some brain lesion while leaving a uniquely human person behind Not only are there losses but behaviors emerge at times that are not seen in people with intact brains but which still reveal a human attempting to cope I do feel that I saw and still see in each such person something intrinsically human but not the same thing in each
