Sanford E. Gerber, 2001-05-11 Many professionals in the communicative sciences are relative newcomers to the understanding of genetics as it applies to communicative disorders. A speech language clinician certainly can diagnose and treat stuttering for example but that clinician may not be fully aware of the role of a genetic counselor for the family of a stutterer. An audiologist may be able to assess a hearing impairment but an understanding of the underlying genetics of that impairment would make that person a better audiologist. The medical geneticist similarly could have an inadequate appreciation of how our genes may affect language function. All of these professionals need a source that brings together essential ideas from related disciplines. This is a book about human communication both normal and disordered and how our communication abilities are affected by our genes. Many probably most communicative disorders are of genetic origin even if not exclusively genetic. A knowledge of genetics therefore is essential to our understanding of communication of communicative disorders of how such disorders come about and of how to deal with them. This is the only book to consider the genetics of communicative disorders from a broad perspective. It examines genetics, embryology and epidemiology along with study of the hearing speech and language disorders themselves. It also introduces review of issues relevant to genetic counseling and ethics. It is a unique and comprehensive work whose contributors are the leading experts in their respective disciplines. Only book available to consider all communicative disorders. Unparalleled scrutiny of the sciences basic to the genetics of communicative disorders. Specific attention paid to clinical and ethical issues. **An Advanced Review of Speech-language Pathology** Celeste Roseberry-McKibbin, 2000 *Aphasia and Related Neurogenic Communication Disorders* Ilias Papathanasiou, Patrick Coppens, 2021-06-03 *Aphasia and Related Neurogenic Communication Disorders* is designed for the graduate course on Aphasia. Part 1 of the textbook covers aphasiology while part 2 addresses related disorders. Overall the textbook offers an overview of aphasia and related neurogenic communication disorders by presenting important recent advances and clinically relevant information. It emphasizes Evidence Based Practice by critically reviewing the pertinent literature and its relevance for best clinical practices. Case studies in all clinical chapters illustrate key topics and a Future Directions section in each chapter provides insight on where the field may be headed. The WHO ICF Framework is introduced in the beginning of the text and then reinforced and infused throughout.
