Pharmacology and Therapeutics of Airway Disease Kian Fan Chung, Peter J. Barnes, 2009-10-27 Written as a concise clinical reference guide covering the current and future airway disease treatments this text encompasses pathophysiology of respiratory tract diseases the methods of measuring airway and clinical responses the concepts upon which many treatments are used in COPD and asthma conditions the way in which these treatments work **Asthma: Pathophysiology, Herbal**

and Modern Therapeutic Interventions Sheikh Rayees, Inshah Din, 2021-03-26 Asthma is a chronic airway disease affecting over 300 million people worldwide with an expected increase of an additional 100 million by 2025. Past decade has observed a notable increase in asthma prevalence on both national and global levels with highest rates observed in western countries about 30%. Over the past 40 years a drastic increase in global prevalence, morbidity, mortality and economic burden have been observed due to asthma especially in children. The rising numbers of hospital admissions for asthma especially young children reflect an increase in severe asthma, poverty and lack of proper disease management. Worldwide approximately 180 000 deaths annually are caused due to this condition. The financial burden on a single asthma patient per year in different western countries ranges from US 300 to 1 300. Asthma is an intricate respiratory disorder with differences in its severity, natural history and hence treatment response. These differences in intensities of various presentations such as bronchial hyper responsiveness, airway inflammation, mucus production, airflow obstruction make asthma a heterogeneous disease. The mainstay of current therapies for asthma includes inhaled corticosteroids, phosphodiesterase inhibitors, leukotriene modifiers and 2 adrenoceptor agonists. Some of the currently available drugs are efficient in one or more aspects. However the associated side effects or heterogeneity of the disease limit their usefulness and efficacy thereby putting a demand on development of new drugs and therapies. On the other hand asthma has also been treated/managed via herbal medications. These approaches have been described in Unani, Ayurvedic or Chinese system of medicine since antiquity. In fact several anti asthmatic drugs were developed from herbs commonly utilized in the non Western system of medicine. This book focuses on the pathophysiology of asthma, its medication both herbal and modern, limitations and their future prospects.

Rosenwasser,2009-11-10 When I entered the field of allergy in the early 1970s the standard textbook was a few hundred pages and the specialty was so compact that texts were often authored entirely by a single individual and were never larger than one volume Compare this with Allergy Frontiers Epigenetics Allergens and Risk Factors the present s volume text with well over 150 contributors from throughout the world This book captures the explosive growth of our specialty since the single author textbooks referred to above The unprecedented format of this work lies in its meticulous attention to detail yet comprehensive scope For example great detail is seen in manuscripts dealing with topics such as Exosomes naturally occurring minimal antigen presenting units and Neuropeptide S receptor 1 NPSR1 an asthma susceptibility gene The scope is exemplified by the unique approach to disease entities normally dealt with in a single chapter in most texts For example anaphylaxis a topic usually confined to one chapter in most textbooks is given five chapters in Allergy Frontiers This approach allows the text to employ multiple contributors for a single topic giving the reader the advantage of being introduced to more than one vi point regarding a single disease **New Drug Development for Known and Emerging**
