Why aren't the elements listed in alphabetical order?

Why?

As charts go, the periodic table is a bit odd. It's not square. Large portions of the table appear to be missing at the top. It's not organized alphabetically so elements can be found easily. But to a chemist, the periodic table is a very powerful tool. The periodic table is organized by properties, both chemical and physical. Those properties relate to the electronic structure of the atoms of each element. In today's activity, you are going to study how the ground state electron configurations and structure of atoms are related to the shape and organization of the periodic table.

The grid is divided into four sections: a top-left section (rows 1-3, columns 1-3), a top-right section (rows 1-3, columns 13-18), a middle section (rows 4-7, columns 1-18), and a bottom section (rows 8-9, columns 3-18). The label $3p^3$ is located in the top-right section, specifically in the second row, eighth column of that section (row 5, column 16 of the overall grid).
