

Membrane Structure and Function POGIL Answer key

Exam 2023

How many different types of molecules are shown in Model 1? - ANSWER two: circle and triangle

Number of triangles and circles on each side of membrane? - ANSWER 14 triangles on left: 0 triangles on right

12 circles on left: 13 circles on right

Which shape is larger? - ANSWER triangle

Describe direction of movement of molecules in Model 1. - ANSWER Random-all directions

Which molecules are able to pass through the semi-permeable membrane? - ANSWER Circles can fit through the gaps due to small size and are nearly equally distributed on both sides of the membrane.

Would you expect the Model 1 system to change over time? - ANSWER No. The triangles will remain on the left side because they are too big to pass through membrane. Circles will remain evenly distributed on both sides due to size and random movement.

What two major types of biological molecules compose the majority of the cell membrane in Model 2? - ANSWER Phospholipids and membrane spanning proteins.

How many different protein molecules are found in Model 2? - ANSWER Four. Two small surface proteins and 2 membrane spanning proteins.

What is the difference between the position of the surface proteins and the membrane-spanning proteins? - ANSWER Surface proteins do not span the cell membrane.

When a carbohydrate chain is attached to a protein, what is the structure called? - ANSWER Glycoprotein; glyco = carbohydrate

When a carbohydrate is attached to a phospholipid, what is the structure called? - ANSWER Glycolipid

Robinson, 2014-05-20 Mammalian Cell Membranes Volume 1 General Concepts is a collection of papers that deals on the physical and chemical studies focusing on membrane structure and function This collection reviews the interpretation of the anatomy of the mammalian cell including its separation and cultivation The different methods of isolation of its surface membrane are then evaluated to bring some understanding of the subject More descriptions of the various physical techniques adopted to membrane constituents and to cell membrane research such as nuclear magnetic resonance electron spin resonance fluorescence and flash photolysis spectroscopy are given Discoveries of mitochondrial DNA and other techniques have increased investigation of the synthesis and components of functional mitochondria leading to different perspectives on models of membrane structure This book can serve the needs of biochemists and microbiologists in advancing their work research and understanding of mammalian cell membranes *Biological Membranes* Roger Harrison, 2013-11-22 to the Second Edition RESEARCH INTO MEMBRANE ASSOCIATED PHENOMENA HAS EXPANDED VERY greatly in the five years that have elapsed since the first edition of Biological Membranes was published It is to take account of rapid advances in the field that we have written the present edition There is now general acceptance of the fluid mosaic model of membrane structure and of the chemiosmotic interpretation of energetic processes and our attention has shifted from justifying these ideas to explaining membrane functions in their terms Much more information has become available concerning the role of the plasma membrane in the cell's recognition of and response to external signals and this is reflected in the increased coverage of these topics in the book The general form of the book remains the same As before a list of suggested reading sub divided by chapter is provided and this has been expanded to include a greater proportion of original papers The book is still primarily designed as an advanced undergraduate text and also to serve as an introduction for post graduate workers entering the field of membrane research We have taken cognizance of the comments of many reviewers colleagues and students on the first edition and thank them for their contributions In particular we wish to acknowledge our colleagues R Eiseenthal G D Holman D W Hough and A H Rose Dr C R **Concepts of Membrane Structure** Ronald Aloia, 2012-12-02 Membrane Fluidity in Biology Volume 1 Concepts of Membrane Structure covers membrane properties influenced by alterations in membrane lipid compositions and

or other organizational parameters that are encompassed by the term fluidity This book is composed of eight chapters that discuss significance of fluidity changes in both normal and pathological cellular functions This book starts by describing membrane structural organization and composition and arrangement of the molecular components of cell membranes This is followed by discussions on structural properties of lipids and role of nonbilayer lipid structures in membrane fusion The methodological approaches in study of cellular membrane structural diversity and fluid mosaic model for accurate representation of membrane fluidity are also discussed This volume then describes the phenomenon of reversed or negative membrane images as viewed with transmission electron microscope Chapters 6 and 7 explain the interaction of cytochrome P 450 with phospholipids and proteins in the endoplasmic reticulum and steps in the derivation of membrane structure and packing principles Finally the concluding chapter focuses on the membrane of the human red blood cell and presents relatively simple arguments concerning its physical properties The book will serve as a primary source for research scientists and teachers interested in cellular membrane fluidity phenomena
