Mole Ratios Lifeliqe, 2019 This lesson plan relates balanced chemical equations to everyday analogies defines stoichiometry and uses mole ratios to convert between amounts of substances in chemical reactions Teaching the Mole Concept in Stoichiometry Timothy Scot Albrecht, California State Polytechnic University, Pomona. College of Education & Integrative Studies, 2009 *Stoichiometry and structure* Michell J. Sienko, 1964 *Formulation and Stoichiometry* Emil J. Margolis, 2012-12-06 The purpose of this book is to interpret more sensitively some of the offerings of the standard text book of general chemistry As a supplement thereto it covers various aspects of formulation and stoichiometry that are frequently treated far too perfunctorily or in many instances are not considered at all The inadequate attention often accorded by the comprehensive text to many topics within its proper purview arises understandably enough from the numerous broad and highly varied objectives set for the first year of the curriculum for modern chemistry in colleges and universities For the serious student this means more often than not the frustrations of questions unanswered The amplification that this book proffers in the immediate area of its subject covers the equations representing internal redox reactions not only of the simple but also of the multiple disproportionations of which the complexities often discourage an undertaking despite the challenge

they offer distinctions to be observed in the balancing of equations in contrasting alkali basic and ammonia basic reaction media quantitative contributions made by the ionization or dissociation effects of electrolytes to the colligative properties of their solutions intensive application of the universal reaction principle of chemical equivalence to the stoichiometry of oxidation and reduction

Exploring the Effectiveness of POGIL and Chemorganisers in Foundation Chemistry Christine Elizabeth Mundy, 2015 The extended BSc programme at the University of Pretoria was the context of this study specifically students enrolled in foundation chemistry This study was aimed at improving teaching and learning at this level by implementing pre existing education interventions Process Oriented Guided Inquiry Learning POGIL and the use of the Chemorganiser Themes chosen for the interventions were the mole concept and stoichiometry and redox reactions as these have been identified as common areas of difficulty in Chemistry Johnston 2010 POGIL required students to take on well defined roles and work in groups on specially designed worksheets Farrell Moog 1990 served as the theoretical lens for the study The effectiveness of each intervention was explored using the classroom variables of productivity student preference and opportunity to learn along with the output of student performance Mixed methods including observations focus group interviews student questionnaires and student performance data were used During the first year of implementation the Chemorganisers were well received by students Increased classroom participation and confidence was noted along with stable levels of attendance Students requested the inclusion of more challenging content This intervention did not affect the time allocated for the tutorials and was easy to implement Students performed better on average than their counterparts a highly statistically significant difference was noted p
