STUDY GUIDE: ORBITAL MOTION

STUDY GUIDE

ORBITAL MOTION

Orbital Motion

- Orbital motion is when an object follows a circular or elliptical path (an "orbit") around another object, where the only force acting on the object is gravity.
- Technically the two objects are both in orbit around a common point called a "barycenter" but we'll focus on a simplified version for now, where one of the objects has much more mass than the other and the barycenter is approximately at the center of the larger object.

Satellites and the International Space Station are in orbit around the earth about 200-2000 km above the surface

The moon is in orbit around the earth at a distance of about 384,600 km

The earth is in orbit around the sun at a distance of about 149,000,000 km
