Knowledge-building Karl Maton, Susan Hood, Suellen Shay, 2015-10-08

Education and knowledge have never been more important to society yet research is segmented by approach, methodology or topic. Legitimation Code Theory or LCT extends and integrates insights from Pierre Bourdieu and Basil Bernstein to offer a framework for research and practice that overcomes segmentalism. This book shows how LCT can be used to build knowledge about education and society. Comprising original papers by an international and multidisciplinary group of scholars, Knowledge building offers the first primer in this fast growing approach. Through case studies of major research projects, Part I provides practical insights into how LCT can be used to build knowledge by enabling dialogue between theory and data in qualitative research, bringing together quantitative and qualitative methodologies in mixed methods research, relating theory and practice in praxis, conducting interdisciplinary studies with systemic functional linguistics. Part II offers a series of studies of pressing issues facing knowledge building in education and beyond, encompassing diverse subject areas including physics, English, cultural studies, music and design.

Being and Becoming Scientists Today Susan A. Kirch, Michele Amoroso, 2016-02-10 Can I contribute to science Do I like to work on the problems of science How do scientists know what they know Would I like to be become a scientist These are questions that interest new science students The authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning They argue that students are typically taught from a disciplinary perspective of science Using this lens students are viewed as people who need to learn a particular canon of information methods and ways of knowing about the world a perspective that may be useful for practicing scientists but not ideal for young learners In this disciplinary approach to science education there is little room for development as a scientist In contrast the approach championed by Kirch and Amoroso places learner questions about the world at the forefront of teaching and learning and treats science as a system of human activity The historical explorations theoretical insights and practical advice presented here are appropriate for all ages and educational settings In *Being and Becoming Scientists Today* the authors provide new tools for thinking about science ideas for how to reveal the multiple stories of knowledge production to learners and approaches to teaching science as a collective process rather than a series of

contributions made by famous individuals In these ways the authors promote the idea that all science learners contribute to the science in our lives
