Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

Tainted Kristin Sharon Shrader-Frechette, 2014 Three fourths of scientific research in the United States is funded by special interests Many of these groups have specific practical goals such as developing pharmaceuticals or establishing that a pollutant causes only minimal harm For groups with financial conflicts of interest their scientific findings often can be deeply flawed To uncover and assess these scientific flaws award winning biologist and philosopher of science Kristin Shrader Frechette uses the analytical tools of classic philosophy of science She identifies and evaluates the concepts data inferences methods models and conclusions of science tainted by the influence of special interests As a result she challenges accepted scientific findings regarding risks such as chemical toxins and carcinogens ionizing radiation pesticides hazardous waste disposal development of environmentally sensitive lands

threats to endangered species and less protective standards for workplace pollution exposure In so doing she dissects the science on which many contemporary scientific controversies turn Demonstrating and advocating liberation science she shows how practical logical methodological and ethical evaluations of science can both improve its quality and credibility and protect people from harm caused by flawed science such as underestimates of cancers caused by bovine growth hormones cell phones fracking or high voltage wires This book is both an in depth look at the unreliable scientific findings at the root of contemporary debates in biochemistry ecology economics hydrogeology physics and zoology and a call to action for scientists philosophers of science and all citizens

Collisions Alec Nevala-Lee, 2025-06-10 From the acclaimed biographer of Buckminster Fuller a riveting biography of the Nobel Prize winning physicist who became the greatest scientific detective of the twentieth century To his admirers Luis W Alvarez was the most accomplished inventive and versatile experimental physicist of his generation During World War II he achieved major breakthroughs in radar played a key role in the Manhattan Project and served as the lead scientific observer at the bombing of Hiroshima In the decades that followed he revolutionized particle physics with the hydrogen bubble chamber developed an innovative X ray method to search for hidden chambers in the Pyramid of Chephren and shot melons at a rifle range to test his controversial theory about the Kennedy assassination At the very end of his life he collaborated with his son to demonstrate that an asteroid impact was responsible for the extinction of the dinosaurs igniting a furious debate that raged for years after his death Alvarez was also a combative and relentlessly ambitious figure widely feared by his students and associates who testified as a government witness at the security hearing that destroyed the public career of his friend and colleague J Robert Oppenheimer In the first comprehensive biography of Alvarez Alec Nevala Lee vividly recounts one of the most compelling untold stories in modern science a narrative overflowing with ideas lessons and anecdotes that will fascinate anyone with an interest in how genius and creativity collide with the problems of an increasingly challenging world

Physical Test Methods for Elastomers Roger Brown, 2017-10-18 This book provides comprehensive coverage of all aspects of physical testing of elastomers rubbers and thermoplastic elastomers including mechanical electrical thermal and all aspects of durability Elastomers are an important class of materials used in such products as tyres seals and hose which have markedly different properties to other materials The importance of testing of elastomers means that a comprehensive text on the subject is essential The advantage over general materials testing books is being more specific while the

advantage over general rubber technology books is that testing is dealt with in depth **Transmitting and Gaining Data** Rudolf Ahlswede, 2014-11-15 The calculation of channel capacities was one of Rudolf Ahlswede's specialties and is the main topic of this second volume of his Lectures on Information Theory Here we find a detailed account of some very classical material from the early days of Information Theory including developments from the USA Russia Hungary and which Ahlswede was probably in a unique position to describe the German school centered around his supervisor Konrad Jacobs These lectures made an approach to a rigorous justification of the foundations of Information Theory This is the second of several volumes documenting Rudolf Ahlswede's lectures on Information Theory Each volume includes comments from an invited well known expert In the supplement to the present volume Gerhard Kramer contributes his insights Classical information processing concerns the main tasks of gaining knowledge and the storage transmission and hiding of data The first task is the prime goal of Statistics For transmission and hiding data Shannon developed an impressive mathematical theory called Information Theory which he based on probabilistic models The theory largely involves the concept of codes with small error probabilities in spite of noise in the transmission which is modeled by channels The lectures presented in this work are suitable for graduate students in Mathematics and also for those working in Theoretical Computer Science Physics and Electrical Engineering with a background in basic Mathematics The lectures can be used as the basis for courses or to supplement courses in many ways Ph D students will also find research problems often with conjectures that offer potential subjects for a thesis More advanced researchers may find questions which form the basis of entire research programs **Overpowered** Martin Blank, PhD, 2014-09-16 Keys wallet cell phone ready to go Cell phones have become ubiquitous fixtures of twenty first century life suctioned to our ears and stuck in our pockets Yet we've all heard whispers that these essential little devices give you brain cancer Many of us are left wondering as Maureen Dowd recently asked in the New York Times Are cells the new cigarettes Overpowered brings readers in accessible and fascinating prose through the

science indicating biological effects resulting from low non thermal levels of non ionizing electromagnetic radiation levels considered safe by regulatory agencies coming not only from cell phones but many other devices we use in our homes and offices every day Dr Blank arms us with the information we need to lobby government and industry to keep ourselves and our families safe **Bibliography of Scientific and Industrial Reports** ,1947
