Kieffer, 2013-10-14 If you are an amateur weather geek disaster wonk or budding student of earth sciences you will want to read this book Seattle Times In 2011 there were fourteen natural calamities that each destroyed over a billion dollars worth of property in the United States alone In 2012 Hurricane Sandy ravaged the East Coast and major earthquakes struck in Italy the Philippines Iran and Afghanistan In the first half of 2013 the awful drumbeat continued a monster supertornado struck Moore Oklahoma a powerful earthquake shook Sichuan China a cyclone ravaged Queensland Australia massive floods inundated Jakarta Indonesia and the largest wildfire ever engulfed a large part of Colorado Despite these events we still behave as if natural disasters are outliers Why else would we continue to build new communities near active volcanoes on tectonically active faults on flood plains and in areas routinely lashed by vicious storms A famous historian once observed that civilization exists by geologic consent subject to change without notice In the pages of this unique book leading geologist Susan W Kieffer provides a primer on most types of natural disasters earthquakes tsunamis volcanoes landslides hurricanes cyclones and tornadoes By taking us behind the scenes of the underlying geology that causes them she shows why natural disasters are more common than we realize and that their impact on us will increase as our growing population crowds us into ever more vulnerable areas Kieffer describes how

natural disasters result from changes in state in a geologic system much as when water turns to steam By understanding what causes these changes of state we can begin to understand the dynamics of natural disasters In the book s concluding chapter Kieffer outlines how we might better prepare for and in some cases prevent future disasters She also calls for the creation of an organization something akin to the Centers for Disease Control and Prevention but focused on pending natural disasters

Spacecraft Dynamics and Control Enrico Canuto,Carlo Novara,Donato Carlucci,Carlos Perez-Montenegro,Luca Massotti,2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the

control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code
