

Robertshaw®

The Robertshaw® "D" Series Pilot Ignition System was introduced in 1977. The system consisted of a 7000 BDER gas valve and one of two models of ignition control units. These units had a factory model number of SP720 (nonlockout) and SP750 (lockout). They are obsolete and no longer available. This modernization kit was designed to replace these obsolete ignition control units. The modernization kit will upgrade the old heat sensor/flame switch system to flame rectification.

- Determine ignition control unit type and factory model number.**
Determine the factory model number by locating the number on the control's rating plate and visually comparing it with the drawings below.
- Determine system wiring method.**
There are three types of wiring possibilities that can be encountered. Determine from the schematics below which wiring method the application has. Proceed to appropriate section for that wiring method.
Note: Previously-retrofitted systems will have a plug-in connector in the wiring harness at the ignition control unit.
