 Eric Schopler, 2012-12-06 The First International Leo Kanner Colloquium on Child Development Deviations and Treatment  
 explores relationships between experimental research, normal development and interventions with early infantile autism as a  
 reference model of relatively unambiguous abnormal development. Sponsored by the Treatment and Education of Autistic and  
 related Communications handicapped Children (TEACCH) Project at the University of North Carolina at Chapel Hill, the  
 colloquium tackled the challenge of facilitating communications among scientists of different disciplines working in a spe-  
 cialized area. The meeting proved successful in generating an interplay and information exchange among scientists of diverse  
 academic and professional orientation who if not completely able to agree on common factors did nevertheless achieve  
 awareness and clarification of their differences. The TEACCH conference and this volume have implications for all research  
 efforts within and outside the domain of mental health. This is particularly so at a time of limited dollar resources for research  
 support. The present and foreseeable future represent such a time one when communication among fields, resource  
 competition between basic and applied research, biomedical versus psychosocial research and the question of research  
 utilization assume a new commanding significance. Thus the question of accountability for research has come to the fore.
