Physics and Literature Aura Heydenreich, Klaus Mecke, 2021-12-20 Physics and Literature is a unique collaboration between physicists literary scholars and philosophers the first collection of essays to examine together how science and literature beneath their practical differences share core dimensions forms of questioning thinking discovering and communicating insights This book advances an in depth exploration of relations between physics and literature from both perspectives It turns around the tendency to discuss relations between literature and science in one sided and polarizing ways The collection is the result of the inaugural conference of ELINAS the Erlangen Center for Literature and Natural Science an initiative dedicated to building bridges between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics The Routledge Atlas of South Asian Affairs Robert W. Bradnock, 2015-10-14 South Asia has developed from a group of newly independent post Colonial states of at most secondary importance to the wider world to its current position as a region of central strategic importance to both global economic development and world peace and stability This Atlas highlights the global significance of South Asia in relation to economic geopolitical and strategic interests It provides a coherent descriptive and analytical account of the key elements of the complex societies that make up the region and its component countries Illustrated with more than 100 original maps and offering concise entries on key issues the book is structured thematically in these sections Global Context Geographical Environments Historical Evolution of South Asia Key Issues in modern South Asia Economy and Security Designed for use in teaching undergraduate and graduate classes and seminars in geography history economics anthropology international relations political science and the environment as well as regional courses on the South Asia this book is also a comprehensive reference source for libraries and decision makers focusing on South Asia *Junior Graphic* Mavis Kitcher (Mrs), 2014-02-26 **NTA UGC NET Paper 1 Topic-wise 52 Solved Papers (2020 to 2004) 2nd Edition** Disha Experts, 2021-02-04 **Oswaal SSC (Staff Selection Commission)| CAPFs (CPO)| Paper-1| 15 Previous Years | Solved Papers| Year-wise| 2017 to 2023** Oswaal Editorial Board, 2024-02-03 Description of the product 100% Exam Ready with 2023 Papers Fully Solved Extensive Practice with 3000 Questions and One Sample Paper Concept Clarity Learn New Concepts through Detailed Explanations 100% Exam Readiness with Latest Year wise Trend Analysis 2019 2023 Valuable

structures in (Ti,Al)N hard coatings Katherine M. Calamba, 2019-05-27 This study highlights the role of nitrogen vacancies and defect structures in engineering hard coatings with enhanced phase stability and mechanical properties for high temperature applications Titanium aluminum nitride Ti Al N based materials in the form of thin coatings has remained as an outstanding choice for protection of metal cutting tools due to its superior oxidation resistance and high temperature wear resistance High temperature spinodal decomposition of metastable Ti Al N into coherent c TiN and c AlN nm sized domains results in high hardness at elevated temperatures Even higher thermal input leads to transformation of c AlN to w AlN which is detrimental to the mechanical properties of the coating One mean to delay this transformation is to introduce nitrogen vacancies In this thesis I show that by combining a reduction of the overall N content of the c Ti Al N y 1 coating with a low substrate bias voltage during cathodic arc deposition an even more pronounced delay of the c AlN to w AlN phase transformation is achieved Under such condition age hardening is retained until 1100 C which is the highest temperature reported for Ti Al N films During cutting operations the wear mechanism of the cathodic arc deposited c Ti_{0.52}Al_{0.48}N_y with N contents of y 0.92 0.87 and 0.75 films are influenced by the interplay of nitrogen vacancies microstructure and chemical reactions with the workpiece material The y 0.75 coating contains the highest number of macroparticles and has an inhomogeneous microstructure after machining which lower its flank and crater wear resistance Age hardening of the y 0.92 sample causes its superior flank wear resistance while the dense structure of the y 0.87 sample prevents chemical wear that results in excellent crater wear resistance Heteroepitaxial c Ti_{1-x}Al_xN_y y 0.92 0.79 and 0.67 films were grown on MgO 001 and 111 substrates using magnetron sputter deposition to examine the details of their defect structures during spinodal decomposition At 900 C the films decompose to form coherent c AlN and c TiN rich domains with elongated shape along the elastically soft direction Deformation maps show that most strains occur near the interface of the segregated domains and inside the c TiN domains Dislocations favorably aggregate in c TiN rather than c AlN because the later has stronger directionality of covalent chemical bonds At elevated temperature the domain size of 001 and 111 oriented c Ti Al N_y films

increases with the nitrogen content This indicates that there is a delay in coarsening due to the presence of more N vacancies in the film The structural and functional properties $Ti_{1-x}Al_xN_y$ are also influenced by its Al content x TiN and $Ti_{1-x}Al_xN_y$ $y = 1-x$ 0.63 and $x = 0.77$ thin films were grown on MgO (111) substrates using magnetron sputtering technique Both TiN and $Ti_{0.27}Al_{0.63}N$ films are single crystals with cubic structure $Ti_{0.23}Al_{0.77}N$ film has epitaxial cubic structure only in the first few atomic layers then it transitions to an epitaxial wurtzite layer with an orientation relationship of c $Ti_{0.23}Al_{0.77}N$ (111) || (100) w $Ti_{0.23}Al_{0.77}N$ (0001) || (20) The w $Ti_{0.23}Al_{0.77}N$ shows phase separation of coherent nm sized domains with varying chemical composition during growth After annealing at high temperature the domains in w $Ti_{0.23}Al_{0.77}N$ have coarsened The domains in w $Ti_{0.23}Al_{0.77}N$ are smaller compared to the domains in c $Ti_{0.27}Al_{0.63}N$ film that has undergone spinodal decomposition The results that emerged from this thesis are of great importance in the cutting tool industry and also in the microelectronics industry because the layers examined have properties that are well suited for diffusion barriers
