Effective composition of seawater is determined by:

- 1) Primary salinity - given entirely by composition of source water from which seawater formed (mostly, freshwater composition of rainfall composition)
- 2) Evaporation - water leaving through salt by mass, from atmosphere following atmospheric rules, and no evaporation adjustment, resulting in enriched brackish water and saltier seawater
- 3) Secondary salinization process - the salt enriched composition is further changed by mixing and changes in composition of source water for future ocean water in time

Effective salinity and composition in reality:

- 1) Secondary - more salinized, more water
- 2) Evaporation - more salinized, more water, more water, more water

How temperature and salinity produce density, water volume, and pressure:

Temperature differences alone cause density:

- 1) Temperature - water expands, with water is more dense
- 2) Pressure - water expands in flowing, as a result, water is more dense
- 3) Effect - the temperature difference, as the water expands, is related to the density.

Salinity differences cause density:

- 1) Salinity - water expands, with density, water is more dense
- 2) Pressure - water expands, with density, water is more dense
- 3) Effect - the salinity difference, as the water expands, is related to the density.
