Offline, online applications and social media have changed the conventional learning and teaching habits and competencies. In terms of learners, it has been empirically proven that the use of educational technologies in the classroom makes learning easier and more enjoyable. On the other hand, it also poses threats to students such as cyberbullying and online addiction. While exploiting the opportunities of technological use in the classroom, educators must also remain vigilant and formulate ways to overcome the challenges and risks brought by technology. *Enriching Teaching and Learning Environments With Contemporary Technologies* is an essential research publication that aims to present exemplary practices of technology use and their management in pedagogical purposes in learning and teaching environments. The book also analyzes problems that may arise and develops policies on educational technologies and the exploitation of technology with pedagogical purposes as part of the discussion to solve these challenges. Featuring a wide range of topics such as augmented reality, mass media and religious education, this book is ideal for educators who want to use technology in class, educational administrators who have responsibilities for developing policies on educational technologies and managing the use of them, and researchers who want to carry out a deep investigation into the subject. Additionally, educational software developers, academicians, instructional designers, curriculum developers, education professionals, and students will also benefit from the research contained within the book. Theoretical Nursing Afaf Ibrahim Meleis, 2011. An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories; therefore, the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice and others believing it should be driven by research.
