REACTION RATES AND EQUILIBRIUM

SECTION 18.1 RATES OF REACTION (pages 541–543)

This section explains what is meant by the rate of a chemical reaction. It also uses collision theory to derive from the rate of a chemical reaction an equation for the reaction conditions.

► Collision Theory (pages 541–543)

1. How can rates of chemical change expressed?

Rates of chemical change are usually expressed in dimensions of moles/liters/second per unit time.

2. Look at Figure 18.1 on page 541. In a typical reaction, as time passes, the amount of reactants decreases and the amount of products increases.

3. What does collision theory say about the reaction of atoms, ions, or molecules resulting in ionic products when they collide?

Collision theory states that the molecules must have enough kinetic energy when they collide to form products.

4. Look at the Space below. One shows a collision that results in the formation of product. Label it effective collision. Label the other collision's distribution collision.

5. In the following sentence true or false? Particles lacking the necessary kinetic energy to react become apart unchanged when they collide. TRUE

6. Look at Figure 18.3 on page 543. Which arrangement of atoms models the least amount of energy?

- a. reactants
b. activated complex
c. products

Reaction Rate Theory and Rare Events Baron Peters, 2017-03-22 *Reaction Rate Theory and Rare Events* bridges the historical gap between these subjects because the increasingly multidisciplinary nature of scientific research often requires an understanding of both reaction rate theory and the theory of other rare events The book discusses collision theory transition state theory RRKM theory catalysis diffusion limited kinetics mean first passage times Kramers theory Grote Hynes theory transition path theory non adiabatic reactions electron transfer and topics from reaction network analysis It is an essential reference for students professors and scientists who use reaction rate theory or the theory of rare events In addition the book discusses transition state search algorithms tunneling corrections transmission coefficients microkinetic models kinetic Monte Carlo transition path sampling and importance sampling methods The unified treatment in this book explains why chemical reactions and other rare events while having many common theoretical foundations often require very different computational modeling strategies Offers an integrated approach to all simulation theories and reaction network analysis a unique approach not found elsewhere Gives algorithms in pseudocode for using molecular simulation and computational chemistry methods in studies of rare events Uses graphics and explicit examples to explain concepts Includes problem sets developed and tested in a course range from pen
