30 livres de physique qui ont changé le monde Jean-Jacques Samuëli, Jean-Claude Boudenot, 2007 Pour connaître l'histoire des sciences et comprendre une discipline le mieux est l'évidence d'en lire les éditions originales des textes fondateurs afin d'y découvrir l'origine réelle des concepts et des théories exposés Mais une telle lecture exige d'avoir déjà acquis une certaine culture scientifique d'être quelque peu polyglotte et surtout obstiné Il est en effet presque toujours difficile de trouver dans un ouvrage complet là où les quelques pages ou phrases qui sont importantes ou qui ont été dogmatisées a posteriori au point que chacun imagine qu'il s'agit d'une vérité première Ainsi on affirme que Newton est le père d'une théorie corpusculaire de la lumière Pourquoi cela Parce que dans la question 29 de la deuxième édition de l'Opticks Newton a voqué cette possibilité Il n'affirmait rien et posait simplement une question mais depuis on a affirmé puis prouvé que c'était son hypothèse Cet exemple justifie dans cette logique la présentation d'extraits significatifs des éditions originales ou de leur traduction en français plutôt que de textes complets dans lesquels il est difficile de discerner l'essentiel En fait cet ouvrage vise à clarifier l'histoire de la physique en présentant dans l'ordre chronologique un choix de trente extraits d'ouvrages ou mémoires fondateurs de cette science publiés entre 1600 et 1915 et couvrant la plupart de ses branches mécanique électromagnétisme optique thermodynamique cristallographie radioactivité relativité restreinte et théorie des quantas Vingt-huit courtes biographies des auteurs de ces travaux précèdent ces extraits Sont ajoutés ces derniers quelques commentaires rappels et références qui ont semblé utiles pour la bonne compréhension des expérimentations théoriques ou concepts voqués dans le but de laisser au lecteur la faculté de former son propre jugement sur les textes présentés Présentation d'extraits significatifs et représentatifs d'une trentaine d'ouvrages fondateurs de la physique publiés entre 1600 et 1915 Galilée Newton Franklin ou encore Joule Becquerel Einstein Avec de courtes biographies des auteurs des commentaires des rappels et des références
