On-Line Trajectory Generation in Robotic Systems Torsten Kröger, 2010-01-10 By the dawn of the new millennium

robotics has undergone a major transformation in scope and dimensions. This expansion has been brought about by the maturity of the field and the advances in its related technologies. From a largely dominant industrial focus, robotics has been rapidly expanding into the challenges of the human world. The new generation of robots is expected to safely and dependably co-habitat with humans in homes, workplaces, and communities, providing support in services, entertainment, education, health care, manufacturing, and assistance. Beyond its impact on physical robots, the body of knowledge robotics has produced is revealing a much wider range of applications reaching across diverse research areas and scientific disciplines such as biomechanics, haptics, neurosciences, virtual simulation, animation, surgery, and sensor networks, among others. In return, the challenges of the new emerging areas are providing an abundant source of stimulation and insights for the field of robotics. It is indeed at the intersection of disciplines that the most striking advances happen. The goal of the series of Springer Tracts in Advanced Robotics (STAR) is to bring in a timely fashion the latest advances and developments in robotics on the basis of their significance and quality. It is our hope that the wider dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field.

Dynamic Models of Energy, Robotic, and Biological Systems Jose de Jesus Rubio, Alejandro Zacarias, Jaime Pacheco, 2025-05-30. Dynamic models are essential for understanding the system dynamics. It is of importance because one mistake in experiments could cause accidents or damages while one mistake in the simulation of dynamic models could cause nothing. Each system has a different dynamic model; hence, this book presents the designs of 10 dynamic models which are mainly classified in two ways. The first kind of dynamic models are mainly obtained by the Euler-Lagrange method and described by differential equations. The second kind of dynamic models are mainly obtained by the neural networks and described by difference equations. Topics and features: Contains the dynamic models of energy systems. Derives dynamic models of energy systems by the Euler-Lagrange method. Includes the dynamic models of robotic systems. Contains the dynamic models of biological systems. Derives dynamic models of robotic systems by the Euler-Lagrange method. Obtains dynamic models of biological systems by neural networks. This book is expected to be used primarily by researchers and secondary by students and in the areas of control, robotics, energy, biological, mechanical, mechatronics, and computing systems. Jose de Jesus Rubio, Alejandro Zacarias, and Jaime Pacheco are full Professors affiliated with the ESIME Azcapotzalco, Instituto Politécnico Nacional, Sección de Estudios de Posgrado e Investigación, Ciudad de México, México. **Multibody**
