

Service Level Agreement

Contract Areas to Consider

Overview	The following section presents a number of key areas to consider when building SLA Contract documents.
Level of Formalization	Service levels may range from a formalized contract that is signed off by representative customer departments to informal "known" levels internal to IT functions. IT should be aware which level of formalization is appropriate.
Ability to Meet Service Targets	IT should ensure that documented levels of service can indeed be met. Targets should allow for a latitude contingency to cover occasional problems or slowdowns to occur without jeopardizing targets. Within ITIL, Availability Management should review planned targets and provide guidance as to what levels may be appropriate given current IT capabilities. Requirements for new capabilities should be highlighted to management to determine whether to invest in them or not.
Control of Customer Expectations	Targets should be communicated to customers in terms that make them clearly understood from their perspective. This promotes a good level of understanding and cooperation when service problems do occur.
Handling SLA Contract Changes	Processes should be in place to handle changes in service requirements. Customers may wish to negotiate better service levels, add new functions that require new levels of service or periodically renew current levels. These should be negotiated through a Service Level Manager and processed via Change Management.
Number of SLA Contracts	Less is better, more greatly increases management overhead to report and manage. It may be determined to have a single contract for all departments versus multiple service contracts for different departments. Another structure may be to have a base agreement that covers everyone as a default with a limited set of overriding contracts for unique needs.
