Cisco Emergency Responder Serviceability Configuration Overview

Note

The following information addresses SNMP Management. For information about SNMP setting for phone tracking, refer to [Set Up SNMP Connections](#).

Emergency Responder supports SNMP V1/V2C and V3. You can use the Serviceability web interface to configure SNMP V1/V2C (Community String and Notification Destination) and SNMP V3 (User and Notification Destination).

Each SNMP version has security models and security levels. Users are assigned to groups that are defined by a security model and specified security levels. Each group also has a defined security access level to a set of MIB objects for reading and writing, which are known as views. The switch has a default view (all MIB objects) and defaults groups defined for SNMP V1 and V2C security models. SNMP V3 provides additional security features that cover message integrity, authentication, and encryption. In addition, SNMP V3 controls user access to specific areas of the MIB tree.

The following sections describe how to configure SNMP V1/V2C and V3.

Serviceability Tools

The following sections describe the Emergency Responder Serviceability tools.
