Question 10
(8 points)

As sample of $\text{C}_2\text{H}_2\text{Cl}_2$ is subjected to electrolysis, it is found that 0.010 moles of chlorine gas are formed for every 0.0050 moles of the sample. An electrochemical cell is constructed as follows:

Use the standard E° values for the reduction half-reactions shown below to determine the standard cell potential for the cell described above. Assume all activities are unity in the calculations.

Standard E° values:

- 1. $\text{Cl}_2(\text{g}) + 2\text{e}^- \rightarrow 2\text{Cl}^-(\text{aq})$ $E^\circ = +1.36 \text{ V}$
- 2. $\text{C}_2\text{H}_2\text{Cl}_2(\text{g}) + 2\text{e}^- \rightarrow \text{C}_2\text{H}_2(\text{g}) + 2\text{Cl}^-(\text{aq})$ $E^\circ = +0.68 \text{ V}$

1 point is earned for each correct answer.

$\text{C}_2\text{H}_2\text{Cl}_2$ reacts readily with H_2O to produce C_2H_2 and HCl , as represented by the following equation:

One of the C_2H_2 hydrocarbons reacts completely with O_2 to give CO_2 and H_2O as products. Write an equation representing the total ΔH° for the complete combustion of C_2H_2 in terms of ΔH° for the reaction shown above and ΔH° for the combustion of C_2H_2 to CO_2 and H_2O .

The standard enthalpy of formation of $\text{C}_2\text{H}_2(\text{g})$ is $+227 \text{ kJ/mol}$. Write an equation representing the total ΔH° for the complete combustion of C_2H_2 in terms of ΔH° for the reaction shown above and ΔH° for the combustion of C_2H_2 to CO_2 and H_2O .

current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

Introduction to Condensed Matter Chemistry Jihong Yu, Ruren Xu, Wenfu Yan, 2024-06-06. Introduction to Condensed Matter Chemistry offers a general view of chemistry from the perspective of condensed matter chemistry, analyzing and contrasting chemical reactions in a more realistic setting than traditional thinking. Readers will also find discussions on the goals and major scientific questions in condensed matter chemistry and the molecular engineering of functional condensed matter. Processes and products of chemical reactions should not be determined solely by the structure and composition of these basic species but also by the complex and possibly multilevel structured physical and chemical environment together referred to as their condensed state. Relevant matters in condensed state should be the main bodies of chemical reactions which is applicable not only to solids and liquids but also to gas molecules as reactions among gas molecules can take place only in the presence of catalysts in specific condensed states or after their state transition under extreme reaction conditions. This book provides new insights on the liquid state chemistry definitions, aspects, and interactions, summarizing fundamentals of main chemical reactions from a new perspective. Helps to establish the new field of Condensed Matter Chemistry. Highlights the molecular engineering of functional condensed matter. Focuses on both liquid and solid state chemistry.
