building a systematic theory is to explain a distinct pattern to state formation that can be observed in practice Despite their conflicts people in fragile societies bargain terms for peaceful coexistence they make attempts to constitute the right to rule as valid state authority in circumstances prone to conflict over which they have imperfect influence not control Though the kind of institutions created will differ with context how rules for state authority are institutionalized follows a consistent basic pattern That pattern defines state formation in peace transitions as both a unified if contingent field of normative practice and an object of comparative study Where the national centric models see local government as a matter belonging to policy on decentralization for later in the reconstruction phase the book uncovers a distinct local government dimension to peace transitions A civic dimension to national conflicts that must be explained incipient or proto local authorities that emerge even during civil war in peace making after state collapse the fact that it is common for peace agreements and constitutions to include rules for local authority for local elections to be held as part of broader democratization and for laws to be enacted to establish local government as part of peace compacts The book develops the concept of local peace transition to explain the distinctive constitutive role of this local dimension in peace making and state formation This path breaking book will be of compelling interest to practitioners scholars and students of comparative constitutional studies international law peace building and state building
