Rift Rift Series 1:

Continental Rifts: Evolution, Structure, Tectonics K.H. Olsen, 1995-11-24 This multi author book has been prepared by an international group of geoscientists that have been active in rift research since the late 1960s In 1984 an informal grass roots study group was initiated to compare individual research results and to explore in greater depth the apparent differences and similarities in the interpretations from various rift systems The group became known as the CREST working group an acronym of Continental Rifts Evolution Structure and Tectonics which not surprisingly became the title of this book Continental Rifts Evolution Structure Tectonics presents an overview of the present state of understanding and knowledge of the processes of continental rifting from a multidisciplinary lithospheric scale perspective The chapters have been structured on each rift system in approximately the same synoptic sequence so as to facilitate comparisons of rifts by the reader The book complements its predecessors by presenting a more unified picture It succeeds in presenting the status of a representative majority of the continental rift systems that have been at the forefront of recent research For students and experienced researchers alike this book will be of significant value in assessing the current state of knowledge and in serving as a framework for future research

Geodynamics of Rifting P.A. Ziegler, 2015-12-04 This volume contains papers giving an interdisciplinary review of 12 major rift systems from North and South America Africa Europe and Asia These papers are written by an international group of academic and industrial specialists each of whom is most knowledgeable about the respective rift The analyzed rifts were selected on the basis of availability of an as complete as possible geological and geophysical data base Thirteen papers deal with geodynamic processes governing the evolution of rifts A comprehensive digest of the available stratigraphic structural geophysical and petrological data together with an extensive list of references is provided for each of the analyzed rift systems The megatectonic setting and dynamics of evolution of each basin is discussed Geodynamic models are tested against the record of the analyzed rifts The question of active as against passive rifting is addressed The rifts analyzed range in age from Precambrian to Recent and cover a wide spectrum of megatectonic settings There is discussion of the evolution of rifts in a
