**Note**

When you start or stop the engine, make sure the engine speed switch is set in LOW position. Turn the engine speed switch to DRILL position before starting drilling. If the mode selector lever is moved to one of the air flushing positions, the engine speed will automatically increase up to maximum 2,300 rpm, and falls down to 1,800 rpm when the flushing air is stopped.

**Note**

The machine will only start in the START mode, the machine will only drill in the DRILL mode, the machine will only turn in the TRAMP mode.

This machine is equipped with the seat safety interlock device. It will stop all the actions and drilling rotation of the rock drill, if operator leaves from operator's seat more than 10 seconds. When the safety device is activated, you can reset the system by returning the mode selector switch (3) to START position once after sitting back in the seat.
