Risk Management in Engineering and Construction Stephen Ogunlana, Prasanta Kumar Dey, 2019-09-09 Today's businesses are driven by customer pull and technological push. To remain competitive in this dynamic business world, engineering and construction organizations are constantly innovating with new technology tools and techniques to improve process performance in their projects. Their management challenge is to save time, reduce cost, and increase quality and operational efficiency. Risk management has recently evolved as an effective method of managing both projects and operations. Risk is inherent in any project as managers need to plan projects with minimal knowledge and information, but its management helps managers to become proactive rather than reactive. Hence, it not only increases the chance of project achievement but also helps ensure better performance throughout its operations phase. Various qualitative and quantitative tools are researched extensively by academics and routinely deployed by practitioners for managing risk. These have tremendous potential for wider applications. Yet the current literature on both the theory and practice of risk management is widely scattered. Most of the books emphasize risk management theory but lack practical demonstrations and give little guidance on the application of those theories. This book showcases a number of effective applications of risk management tools and techniques across product and service life in a way useful for practitioners, graduate students, and researchers. It also provides an in-depth understanding of the principles of risk management in engineering and construction.

It aimed to bring together researchers, engineers, and policymakers to discuss the related techniques to exchange research ideas and to make friends. ICCCI 2010 focused on the following themes: Agent Theory and Application, Cognitive Modeling of Agent Systems, Computational Collective Intelligence, Computer Vision, Computational Intelligence, Hybrid Systems, Intelligent Image Processing, Information Hiding, Machine Learning, Social Networks, Web Intelligence, and Interaction. Around 500 papers were submitted to ICCCI 2010 and each paper was reviewed by at least two referees. The referees were from universities and industrial organizations. 155 papers were accepted for the final technical program. Four plenary talks were kindly offered by Gary G. Yen (Oklahoma State University, USA) on Population Control in Evolutionary Multi-objective Optimization Algorithm, Chin-Chen Chang (Feng Chia University, Taiwan) on Applying De-clustering Concept to Information Hiding, Qinyu Zhang (Harbin Institute of Technology, China) on Cognitive Radio Networks and Its Applications, and

Security Risk Models for Cyber Insurance David Rios Insua, Caroline Baylon, Jose Vila, 2020-12-20 Tackling the cybersecurity challenge is a matter of survival for society at large Cyber attacks are rapidly increasing in sophistication and magnitude and in their destructive potential New threats emerge regularly the last few years having seen a ransomware boom and distributed denial of service attacks leveraging the Internet of Things For organisations the use of cybersecurity risk management is essential in order to manage these threats Yet current frameworks have drawbacks which can lead to the suboptimal allocation of cybersecurity resources Cyber insurance has been touted as part of the solution based on the idea that insurers can incentivize companies to improve their cybersecurity by offering premium discounts but cyber insurance levels remain limited This is because companies have difficulty determining which cyber insurance products to purchase and insurance companies struggle to accurately assess cyber risk and thus develop cyber insurance products To deal with these challenges this volume presents new models for cybersecurity risk management partly based on the use of cyber insurance It contains A set of mathematical models for cybersecurity risk management including i a model to assist companies in determining their optimal budget allocation between security products and cyber insurance and ii a model to assist insurers in designing cyber insurance products The models use adversarial risk analysis to account for the behavior of threat actors as well as the behavior of companies and insurers To inform these models we draw on psychological and behavioural economics studies of decision making by individuals regarding cybersecurity and cyber insurance We also draw on organizational decision making studies involving cybersecurity and cyber insurance Its theoretical and methodological findings will appeal to researchers across a wide range of cybersecurity related disciplines including risk and decision analysis analytics technology management actuarial sciences behavioural sciences and economics The practical findings will help cybersecurity professionals and insurers enhance cybersecurity and cyber insurance thus benefiting society as a whole This book grew out of a two year European Union funded project under Horizons 2020 called CYBECO Supporting Cyber Insurance from a Behavioral Choice Perspective
