Identification of Unknown Bacteria: Lab Report

4 pages | 875 words

Abstract

Identifying unknown bacteria is a crucial task in microbiology. This laboratory report outlines the procedures and results of identifying two unknown bacteria, one gram-positive and one gram-negative, referred to as unknown A. The isolation of the bacteria, Gram staining, and a series of biochemical tests were performed to narrow down the possibilities. The results revealed that the gram-positive bacterium was Staphylococcus aureus, while the gram-negative bacterium was Pseudomonas aeruginosa.

Introduction

Identifying unknown bacteria is essential for various reasons, as different microorganisms possess distinct qualities and characteristics that set them apart. Throughout the semester in the laboratory, we encountered various microorganisms and gained knowledge about their properties. This knowledge is now applied to the process of identifying unknown bacteria, specifically, unknown A.

Materials and Methods

The identification process began with the professor providing the unknown specimens, including one gram-positive and one gram-negative bacterium from a predetermined list. Unknown A was assigned for identification. The procedures followed closely resembled those outlined in the lab manual (1). The initial step involved isolating each bacterium using the streak plate technique. Tryptic Soy Agar (TSA) plates and selective media like mannitol salt and Eosin Methylene Blue (EMB) were employed for isolation. The isolation step is critical as it separates the bacteria, allowing for individual identification. Gram staining was performed to understand the basic morphology of the bacteria. As the plates incubated, distinct colonies of the two bacteria were observed. Colonies from the mannitol salt plate were used to inoculate Tryptic Soy Broth (TSB) for gram-positive culture growth. The purity of this broth was verified using gram staining. Similarly, a circular colony from the TSA plate was used to inoculate TSB for gram-negative growth, and its purity was also tested through gram staining. Once the gram-positive and gram-negative bacteria from unknown A were isolated, specific biochemical tests were conducted for identification. The results of these tests, coupled with deductive reasoning and elimination, led to the identification of the unknown bacteria. The following tests were performed on the gram-positive bacterium: 1. Mannitol salt streaking, 2. Gram staining of the pure isolate, 3. Oxidase test, 4. Catalase test, and 5. Coagulase test. Similarly, the following tests were performed on the gram-negative bacterium: 1. Gram staining of the pure isolate, 2. Blood agar plate streaking, 3. SIM (Sulfide, Motility, Indole) test, and 4. Catalase test.

Results

Gram-Positive Bacterium (Staphylococcus aureus)

Test	Purpose	Reagents/Media	Observation	Results
Gram	To determine the gram reaction and morphology	Crystal violet, Iodine, Alcohol, Safranin	Purple cocci, connected	Gram positive purple cocci
Mannitol salt	Selective growth media for Staphylococci and Micrococcaceae	Mannitol salt plate and gram positive isolate broth	After incubation, media turned yellow	Bacterium is mannitol salt positive
Oxidase test	To determine if bacterium produces cytochrome c oxidase	No color change	Bacterium is oxidase negative	
Catalase test	To identify if bacterium produces catalase	Hydrogen peroxide	Bubbling is seen	Bacterium is catalase positive
Coagulase test	Used to identify if bacterium produces coagulase (enzyme that clots blood plasma)	Citrated rabbit plasma	Clouding and solidification of plasma is seen	Bacterium is coagulase positive

Microbiology David R. Wessner, Dave Wessner, Christine Dupont, Trevor Charles, Josh D. Neufeld, 2022 Microbiology is a comprehensive textbook that facilitates a thorough understanding of the scope nature and complexity of the science of microscopic organisms. It gives a balanced presentation of foundational concepts real world applications and current research and experimentation. The text approaches the subject within the context of exploration and experimentation integrating a wealth of classroom tested pedagogical features. The material is organized around the three pillars of physiology ecology and genetics helping students appreciate the interconnected and dynamic nature of microbiology and explore the relationship between different types of microbes other organisms and the environment.

Peter Kusch,2018-10-08 The methodology of analytical pyrolysis GC MS has been known for several years but is seldom used
in research laboratories and process control in the chemical industry This is due to the relative difficulty of interpreting the
identified pyrolysis products as well as the variety of them This book contains full identification of several classes of polymers
copolymers and biopolymers that can be very helpful to the user In addition the practical applications can encourage
analytical chemists and engineers to use the techniques explored in this volume The structure and the functions of various
types of pyrolyzers and the results of the pyrolysis gas chromatographic mass spectrometric identification of synthetic
polymers copolymers and biopolymers at 700 C are described Practical applications of these techniques are also included
detailing the analysis of microplastics failure analysis in the automotive industry and solutions for technological problems
